OEC MTSS Site
using Select Flow MTS Profile

Superb image quality and a wide range of clinical subject and vascular applications, the OEC MTSS site is an ideal system for the OEC MTSS C-arm imaging of interventional settings.

OEC's latest digital mobile C-arm technology uses the patented "no image" or Motion-Induced Imageless technique that allows the user to perform OEC Digital Subtraction Angiography (DSA) imaging while moving the C-arm in systems. This allows more in imaging coupled with our unique Motionless Imaging Technology where motionless imaging is now possible with improved productivity. Achieve the same benefits of subtraction without all the fuss.

OEC's advanced image processing performs faster than other motion techniques and applies specific processing algorithms to effectively "normalize" it, eliminating what you want to see with otherwise what you don't.

The patented OEC technology processes each imaging profile uniquely to highlight the anatomy of interest. Flow and resolution are processed separately to achieve optimum definition according to the desired profile.

The comprehensive image quality and volume enhancement is only achieved by using the select imaging profile for a specific application. Simple. Certain. Proven.
