Food safety is an important global public health and trade matter with chemical hazards occupying centre stage due to associated acute and chronic health outcomes There is also an increasing need to address antimicrobial resistance concerns While food remains a major vehicle for exposure to these hazards related matrices cannot be ignored Animal feed for instance may contain drug or pesticide residues as well as mycotoxins that could carry over to food either as

parent compounds or their metabolites of toxicological relevance Contaminated water is also another medium of potential exposure to food hazards A concerted effort is required to address the need for a safe food supply and one critical stakeholder is the testing laboratory While this requires trained and capable analysts as well as reliable instrumentation analytical methods are a major need Development and validation to ensure fitness of purpose and availability of these methods is a necessity This manual consisting of several Standard Operating Procedures SOPs presents another opportunity for laboratories to address gaps in analytical methods and or expand their options The manual contains techniques for analyzing certain mycotoxins such as aflatoxins fumonisin and ochratoxin in matrices that include milk edible vegetable oil and animal feed etc A range of veterinary drug residues including permitted and prohibited substances in animal matrices including fish are also addressed Several pesticide residues in cereals fruits and vegetables are also covered A couple of methods for analysis of selected metals are also presented Official Methods of Analysis of AOAC International AOAC International, George W. **Advances in Marine and Freshwater Monitoring to support Aquatic**

**Ecosystem Conservation and Restoration** Elisabetta Manea, Caterina Bergami, Robert Ptacnik, 2023-11-13 Conserving and restoring freshwater and marine ecosystems are priorities addressed by several European and global conservation initiatives. Many management and conservation initiatives have been put in place to support the achievement of declared national and global conservation and sustainability goals. Nonetheless, the extent to which all these initiatives can provide lasting positive effects on conservation and restoration targets is often impaired, limited by the lack of robust baseline data and systematic monitoring, which in turn are constrained by the limited number of long-term monitoring programs and limited dedicated funding. This collection underlines the importance of monitoring in times of global change and shifting baselines and the urgency of boosting conservation strategies to ensure progression towards meeting global conservation objectives. Emphasis is given also to the socio-ecological contexts and dimensions of conservation efforts and the potential of societal engagement in monitoring practices, a key enabling factor to turn conservation initiatives into practical actions and ecosystem protection.
