Drones and the Future of Air Warfare Michael P. Kreuzer,2016-05-26 This book examines the evolution of airpower and specifically the growth and proliferation of Remotely Piloted Aircraft RPAs While most existing literature examines either the law or ethics of RPAs and some newer scholarship looks to the battlefield effectiveness the gains from strikes versus the potential for blowback etc this work investigates it from a broader military perspective It examines the strategy for employment of RPAs across the spectrum of warfare the potential deterrent value of RPAs in some circumstances and the resulting ability of RPAs to fundamentally shift the character of when and how wars are fought The central aim of this book is to evaluate the role of drones in warfare to date and make basic projections on how states will adopt RPAs and UCAVs in the future At the core is the goal of answering a broad underlying research question How will the RPA innovation impact military strategy and international security This book will be of much interest to students of airpower drone warfare military and strategic studies security studies and IR **Innovation, Economic Development and Policy** Jan Fagerberg,2018-04-27

This authoritative and enlightening book focuses on fundamental questions such as what is innovation who is it relevant for what are the effects and what is the role of innovation policy in supporting innovation diffusion The first two sections present a comprehensive overview of our current knowledge on the phenomenon and analyse how this knowledge and the scholarly community underpinning it has evolved towards its present state The third part explores the role of innovation for growth and development while section four is concerned with the national innovation system and the role of innovation policy in influencing its dynamics and responding to the important challenges facing contemporary societies Environmental Change and Human Security in Africa and the Middle East Mohamed Behnassi,Katriona McGlade,2017-01-17 This volume brings together insights on the interactions between environmental change and human security in the Middle East and Africa These regions face particular challenges in relation to environmental degradation the decline of natural resources and consequent risks to current and future human security The chapters provide topical analysis from a range of disciplines on

the theory discourse policy and practice of responding to global environmental change and threats to human security Case studies from Morocco Tunisia Egypt Turkey Iraq and Syria provide empirical evidence with a focus section dedicated to the critical issue of water resources and water security in the region The contributions demonstrate above all that the risks posed to human security arise through multiple and interconnected processes operating across diverse spatial and temporal scales The complexity of these processes requires new ways of thinking and intervening As a contribution the current volume provides engaging insights from theory and practice for those seeking to address the challenges of environmental change

Climate Change Adaptation and Development John Carstensen, 2018-04-19

Climate change is real and it is man made We have put so many greenhouse gas pollutants into the atmosphere that we will see significant and long term change that we need to adapt and adjust to It is important for development practitioners to understand these impacts and the challenge of how and when to adapt to climate change There are plenty of grim presentations of what the extremes of the possible climate scenarios will throw at us over the next 100 years but not all change will be disastrous some change will be beneficial but much of the change will happen at an unprecedented rate that will require the best possible analysis and understanding of how and when we should adapt to climate change This is important for development practitioners as we invest in ensuring that poverty is reduced and eliminated and the well being of everyone is improved Many countries and communities around the world are vulnerable to the impacts of climate change but developing economies may on one hand be less resilient to the impact but could on the other hand be in a better position to make their development climate smart by making the most efficient use of their economic resources The chapters in this book shine a light on the complexity and the multi dimensional aspects of climate change adaptation They gather some of the experiences of addressing climate change impacts in a development context This book was previously published as a special issue of *Development in Practice*

Climate Change in South Asia: Further Need for Mitigation and Adaptation Ruchir Agarwal, Vybhavi Balasundharam, Patrick Blagrove, Ragnar Gudmundsson, Racha Mousa, 2021-08-20

The South Asia region is both a large contributor to climate change and also one of the regions most vulnerable to climate change This paper provides an overview of the region's vulnerabilities national commitments to mitigate emissions and national policies to adapt to a changing climate The paper also discusses policy measures that may be needed to make further progress on both mitigation and adaptation Our analysis suggests that while substantial progress is being made there remains scope to adopt a more cohesive strategy to achieve the region's goals including by improving the monitoring and tracking of adaptation spending and by laying the groundwork to equitably increase the effective price of carbon while protecting low income and vulnerable households in the region

environmental policy **An Introduction to the Green Economy** Adrian C. Newton, Elena Cantarello, 2014-08-13 The green economy is widely seen as a potential solution to current global economic and environmental crises and a potential mechanism by which sustainable development might be achieved in practice Considerable investments are now being made into the development of green technology renewable energy biodiversity conservation resource efficiency recycling of materials and green infrastructure This textbook provides a comprehensive introduction to the green economy using a strongly interdisciplinary approach based on environmental science rather than treating it as a sub set of economics The scientific principles of sustainability are presented which provide the foundations of the green economy with a particular focus on systems based approaches Examples of real world case studies are used to illustrate how the green economy can be achieved in practice In this way the authors provide a thorough overview of both the principles and practice of the green economy drawing from a wide range of disciplines including ecology geography social science psychology sustainability science environmental science law and economics The emphasis is on presenting results of the latest research derived from leading scientific journals Rather than focusing on a single definition of what constitutes a green economy the book introduces readers to the diversity of opinion that exists and engages them in what is an active on going debate This reflects the fact that many aspects of the green economy and sustainable development more generally are currently contested In particular the book will help readers to strengthen their ability to critically evaluate the evidence for and against the views presented and to actively contribute to the future development of the green economy **The Chemical News : and Journal of Physical Science** ,1905 [Chemical News and Journal of Physical Science](#) ,1902 **Fragile World** William T. Cavanaugh, 2018-05-22 In *Fragile World Ecology and the Church* scholars and activists from Christian communities as far flung as Honduras the Philippines Colombia and Kenya present a global angle on the global ecological crisis in both its material and spiritual senses and offer Catholic resources for responding to it This volume explores the deep interconnections for better and for worse between the global North and the global South and analyzes the relationship among the physical environment human society culture theology and economics the integral ecology described by Pope Francis in *Laudato Si* Integral ecology demands that we think deeply about humans and the physical environment but also about the God who both created the world and sustains it in being At its root the ecological crisis is a theological crisis not only in the way that humans regard creation and their place in it but in the way that humans think about God For Pope Francis in *Laudato Si* the root of the crisis is that we humans have tried to put ourselves in God's place According to Pope Francis therefore A fragile world entrusted by God to human care challenges us to devise intelligent ways of directing developing and limiting our power
