

Format:
20 Multiple choice

Reflex:

- Explain a reflex arc, be able to predict if something would get interrupted in a reflex arc what the results would be.
- Explain how a reflex arc is different than processing other stimuli.
 - a reflex arc does not travel all the way to the brain for processing
 - reflex arcs are the same in all humans; we all react the same way

Neuron:

- Know the directionality of a neuron transmitting information.
 - the neuron transmits info from its dendrites on the soma, down the axon (saltatory conduction), to the synaptic terminal and to the synapse
- Recognize the structure of the neuron.
- Explain how a neuron at rest has -70 mV
 - the neuron has more sodium ions outside the cell, has more potassium ions inside the cell (salty banana)
 - some sodium ions leak into the cell and some potassium ions leak out through ion channels, but sodium potassium pump helps to maintain the resting potential by actively transporting 3 sodiums out and 2 potassiums back in
- Explain what occurs in an excitatory and inhibitory nerve impulse.
 - Inhibitory:
 - hyperpolarization
 - opens K^+ ion channels
 - Excitatory:
 - depolarization
 - opens Na^+ ion channels
 - Inhibitory and excitatory impulses can cancel each other out
- Explain what would happen if there was damage to the K^+ channels, Na^+ channels or K^+/Na^+ pump
 - Damage to K^+ channels
- Explain the graph of an excitatory nerve impulse. Know what occurs at each point
 - resting potential: everything is normal at -70 mV. Sodium potassium pump is taking out 3 sodium, bringing in 2 potassium. channels are closed. Outside of cell is more positive than inside of cell.
 - stimulus: must reach threshold of -55 mV for an action potential
 - depolarization: sodium channels open, sodium flows in, membrane voltage rises
 - repolarization: potassium channels open, potassium flows in, sodium channels inactivate, membrane voltage falls
 - refractory period/hyperpolarization: the membrane voltage falls below resting potential, potassium channels close slowly, sodium channels close. Sodium potassium pump reestablishes resting potential.
- Explain how neurotransmitters are released from the synaptic terminal.
 - the action potential reaches terminal, causing influx of calcium from sarcoplasmic reticulum
 - synaptic vesicles fuse with the synaptic terminal membrane, releasing neurotransmitters
- Know: depolarization, repolarization and hyperpolarization/undershoot

Neurotransmitters:

- Explain what occurs when the receptor for a neurotransmitter is blocked.
 - the reaction cannot take place
 - buildup of neurotransmitters
- Explain how neurotransmitters travel across the synapse.
 - depolarization arrives at the synaptic terminal
 - the Ca^{2+} gated ion channels open, influx of calcium into neuron
 - calcium causes exocytosis of synaptic vesicles
 - the vesicles release neurotransmitters into the synapse
- You will receive description of various neurotransmitter functions and asked to make a prediction what would happen if they are inhibited, mimicked, or degraded to early ectetera. These are very application based.
 - Acetylcholine
 - Transmits signal to skeletal muscle
 - Muscle stimulation
 - Memory formation
 - Learning

Martin,Bryan Rynne,2012-12-06 This volume consists of survey articles on current topics in computational wave prop agation

and inverse problems written by leading experts in their respective fields The idea to compile such a volume arose in

conjunction with the LMS Durham Symposium on Computational Methods for Wave Propagation in Direct Scattering held at

the University of Durham from 15th 25th July 2002 which we jointly or ganised The meeting attended by 70 participants from

the UK and overseas was structured around a number of short three lecture survey courses on a range of top ics on

computational wave propagation and inverse problems beginning at the level of a graduate student We were delighted to

secure the participation of distinguished international researchers to present these lectures We felt that it would be valuable

to record this material for the benefit of a wider audience and the idea was hatched that the individual lecturers should be

invited to contribute a survey article Fortunately many of the speakers not only agreed to undertake this arduous task but

produced what we hope you will agree are the high quality contributions found in this volume Finally it is a pleasure to thank

the Engineering and Physical Sciences Research Council of Great Britain and the London Mathematical Society for providing

the generous support that allowed the meeting to take place Mark Ainsworth Glasgow 2003 Penny Davies Dugald Duncan

Facets of Systems Science George J. Klir,2013-11-21 This book has a rather strange history It began in Spring 1989 thirteen years after our Systems Science Department at SUNY Binghamton was established when I was asked by a group of students in our doctoral program to have a meeting with them The spokesman of the group Cliff Joslyn opened our meeting by stating its purpose I can closely paraphrase what he said We called this meeting to discuss with you as Chairman of the Department a fundamental problem with our systems science curriculum In general we consider it a good curriculum we learn a lot of concepts principles and methodological tools mathematical computational heuristic which are fundamental to understanding and dealing with systems And yet we learn virtually nothing about systems science itself What is systems science What are its historical roots What are its aims Where does it stand and where is it likely to go These are pressing questions to us After all aren't we supposed to carry the systems science flag after we graduate from this program We feel that a broad introductory course to systems science is urgently needed in the curriculum Do you agree with this assessment The answer was obvious and yet not easy to give I agree of course but I do not see how the situation could be alleviated in the foreseeable future Biology in America Robert Thompson Young,1922 **Neuroscience** Mark F. biology the question is often posed what has been accomplished This book will be organized around a symposium on the 20 year history of the CNS meetings to be held as part of CNS 2010 in San Antonio Texas in July 2010 The book like the symposium is intended to summarize progress made in Computational Neuroscience over the last 20 years while also considering current challenges in the field As described in the table of contents the chapter s authors have been selected to provide wide coverage of the applications of computational techniques to a broad range of questions and model systems in neuroscience The proposed book will include several features that establish the history of the field For each article its author will select an article originally appearing in a CNS conference proceedings from 15 20 years ago These short less than 6 page articles will provide illustrations of the state of the field 20 years ago The new articles will describe what has been learned about the subject in the following 20 years and pose specific challenges for the next 20 years The second historical mechanism will be the reproduction of the first 12 years of posters from the CNS meeting These posters in and of themselves have become famous in the field they hang in the halls of the NIH in Bethesda Maryland and were constructed as allegories for the state and development of computational neuroscience The posters were designed by the book s editor who will for the first time provide a written description of each poster

The Self-Organizing Brain: From Growth Cones to Functional Networks M.A. Corner,F.H. Lopes da Silva,H.B.M. Uylings,J. van Pelt,1994-10-11 This book concentrates on the organizational level of neurons and neuronal networks under the unifying theme The Self Organizing Brain From Growth Cones to Functional Networks Such a theme is attractive because it incorporates all phases in the emergence of complexity and adaptive organization as well as involving processes that remain operative in the mature state The order of the sections follows successive levels of organization from neuronal growth cones neurite formation neuronal morphology and signal processing to network development network dynamics and finally to the formation of functional circuits

Network Approaches to Diseases of the Brain Matt T. Bianchi,Verne S. Caviness,Sydney S. Cash,2012 This book covers novel approaches using networks and oscillations and it will serve as a catalyst for translating these exciting advancements into the clinical arena This collection of articles aims to accelerate the widespread clinical translation of network approaches by providing practical information accessible to clinicians in neurology and psychiatry fields that are uniquely poised to implement these developments in clinical treatment of brain diseases It should be a useful resource for researchers and clinicians in neurology and psychiatry
