Combining Economic and Political Development Giacomo Luciani,2017-01-23 Since 2011 democratic transitions in the Middle East and North Africa have mostly failed to consolidate and have been hindered by the difficult economic heritage of previous authoritarian governments Yet newly established democratic governments must deliver on the expectations of their people especially the poorer strata otherwise disillusionment may open the door to restoration of authoritarian rule Can democracy succeed Various ideas for economic policies that may help consolidate the early democratisation process are proposed in this volume while major obstacles on the way to democratic success are also highlighted Contributors include

Malala, 2017-11-28 Over the last ten years mobile payment systems have revolutionised banking in some countries in Africa In Kenya the introduction of M Pesa a new financial services model has transformed the banking and financial services industry Giving the unbanked majority access to the financial services market it has attracted over 18 million subscribers which is remarkable given that fewer than 4 million people in Kenya have bank accounts This book addresses the legal and regulatory issues arising out of the introduction of M Pesa in Kenya and its drive towards financial inclusion It considers the interaction between regulation and technological innovation with a particular focus on the regulatory tools institutional arrangements and government decisional processes through the examination as a whole of its regulatory capacity This is done with a view to understanding the regulatory capacity of Kenya in addressing the vulnerabilities presented by technological innovation in the financial industry for consumers after financial inclusion It also examines the way that mobile payments have been regulated by criticising the piecemeal approach that the Central Bank of Kenya has taken in addressing the legal and regulatory issues presented by mobile payments The book argues there are significant gaps in the regulatory regime of mobile banking in Kenya **Fossil Fuel Subsidy Reforms** Jun Rentschler, 2018-04-27 Countries around the

world are spending up to 500 billion per year on subsidising fossil fuel consumption By some estimates the G20 countries alone are spending around another 450 billion on subsidising fossil fuel production In addition the indirect social welfare costs of these subsidies have been shown to be substantial for instance due to air pollution road congestion climate change and economic inefficiency to name a few Considering these numbers there is no doubt that fossil fuel subsidies cause severe economic distortions that compromise countries prospects of achieving equitable and sustainable development This book provides a guide to the complex challenge of designing assessing and implementing effective fossil fuel subsidy reforms It shows that subsidy reform requires a careful balancing of complex economic and political trade offs as well as measures to mitigate adverse effects on vulnerable households and to assist firms with implementing efficiency enhancing measures Going beyond the purely fiscal perspective this book emphasises that smart subsidy reforms can contribute to all three dimensions of sustainable development environment society and economy Over the course of eight chapters this book considers a wide range of agents and stakeholders markets and policy measures in order to distil the key principles of designing effective fossil fuel subsidy reforms This book will be of great relevance to scholars and policy makers with an interest in energy economics and policy climate change policy and sustainable development more broadly *EU*

Competition Law, Data Protection and Online Platforms: Data as Essential Facility Inge Graef, 2016-10-17 All are agreed that the digital economy contributes to a dynamic evolution of markets and competition Nonetheless concerns are increasingly raised about the market dominance of a few key players Because these companies hold the power to drive rivals out of

business regulators have begun to seek scope for competition enforcement in cases where companies claim that withholding data is needed to satisfy customers and cut costs. This book is the first focus on how competition law enforcement tools can be applied to refusals of dominant firms to give access data on online platforms such as search engines, social networks and e-commerce platforms commonly referred to as the gatekeepers of the Internet. The question arises whether the denial of a dominant firm to grant competitors access to its data could constitute a refusal to deal and lead to competition law liability under the so-called essential facilities doctrine according to which firms need access to shared knowledge in order to be able to compete. A possible duty to share data with rivals also brings to the forefront the interaction of competition law with data protection legislation considering that the required information may include personal data of individuals. Building on the refusal to deal concept and using a multidisciplinary approach, the analysis covers such issues and topics as the following: data portability, interoperability, data as a competitive advantage or entry barrier in digital markets, market definition and dominance with respect to data, disruptive versus sustaining innovation, role of intellectual property regimes, economic trade-off in essential facilities cases, relationship of competition enforcement with data protection law and data-related competition concerns in merger cases. The author draws on a wealth of relevant material including EU and US decision-making practice, case law and policy documents as well as economic and empirical literature on the link between competition and innovation. The book concludes with a proposed framework for the application of the essential facilities doctrine to potential forms of abuse of dominance relating to data. In addition, it makes suggestions as to how data protection interests can be integrated into competition policy. An invaluable contribution to ongoing academic and policy discussions about how data-related competition concerns should be addressed under competition law, the analysis clearly demonstrates how existing competition tools for market definition and assessment of dominance can be applied to online platforms. It will be of immeasurable value to the many jurists, business persons and academics concerned with this very timely subject.

State Capitalism Joshua Kurlantzick, 2016. The end of the Cold War ushered in an age of American triumphalism best characterized by the Washington Consensus: the idea that free markets, democratic institutions, limitations on government involvement in the economy and the rule of law were the foundations of prosperity and stability. The last fifteen years, starting with the Asian financial crisis, have seen the gradual erosion of that consensus. Many commentators have pointed to the emergence of a powerful new rival model: state capitalism. In state capitalist regimes, the government typically owns firms in strategic industries. Not beholden to private sector shareholders, such firms are allowed to operate with razor-thin margins if the state deems them strategically important. China, soon to be the world's largest economy, is the best-known state capitalist regime, but it is hardly the only one. In *State Capitalism*, Joshua Kurlantzick ranges across the world: China, Thailand, Brazil, Russia, South Africa, Turkey and more, and argues that the increase in state capitalism across the globe has on balance contributed to a decline in democracy. He isolates some of the reasons for state capitalism's resurgence: the fact that globalization favors economies of scale in the most

critical industries and the widespread rejection of the Washington Consensus in the face of the problems that have plagued the world economy in recent years That said a number of democratic nations have embraced state capitalism and in those regimes state backed firms like Brazil s Embraer have enjoyed considerable success Kurlantzick highlights the mixed record and the evolving nature of the model yet he is more concerned about the negative effects of state capitalism When states control firms whether in democratic or authoritarian regimes the government increases its advantage over the rest of society The combination of new technologies the perceived failures of liberal economics and democracy in many developing nations the rise of modern kinds of authoritarians and the success of some of the best known state capitalists have created an era ripe for state intervention State Capitalism offers the sharpest analysis yet of what state capitalism s emergence means for democratic politics around the world

Europe's Growth Challenge Anders Åslund, Simeon Djankov, 2017 A cogent and systematic look at the ways in which enacting fiscal and governmental policy changes might reinvigorate Europe s stagnant economy

The Nobel Factor Avner Offer, Gabriel Söderberg, 2019-11-19 Economic theory may be speculative but its impact is powerful and real Since the 1970s it has been

closely associated with a sweeping change around the world the market turn This is what Avner Offer and Gabriel Soderberg call the rise of market liberalism a movement that seeking to replace social democracy holds up buying and selling as the norm for human relations and society Our confidence in markets comes from economics and our confidence in economics is underpinned by the Nobel Prize in Economics which was first awarded in 1969 Was it a coincidence that the market turn and the prize began at the same time The Nobel Factor the first book to describe the origins and power of the most important prize in economics explores this and related questions by examining the history of the prize the history of economics since the prize began and the simultaneous struggle between market liberals and social democrats in Sweden Europe and the United States The Nobel Factor tells how the prize created by the Swedish central bank emerged from a conflict between central bank orthodoxy and social democracy The aim was to use the halo of the Nobel brand to enhance central bank authority and the prestige of market friendly economics in order to influence the future of Sweden and the rest of the developed world And this strategy has worked with sometimes disastrous results for societies striving to cope with the requirements of economic theory and deregulated markets
