Excerpt from Laboratory Guide for the Study of the Frog For the introductory study of the structure and physiology of a typical vertebrate there is no form better adapted than the common frog The present course is based largely on the well known works of Huxley Marshall and Holmes the author s task has been mainly that of simplification and adaptation primarily to meet the needs of his own students These directions are the outcome of eight years experience in teaching the biology of the frog in the University of Michigan Syracuse University the University of Wisconsin and the Michigan State Normal College the author is naturally much indebted to his former teachers and associates particularly to Prof S J Holmes As a general rule the order of topics in the text should be followed since it is planned to give a distinct picture of each organ system in its relation to the whole with the greatest economy of time and material For pedagogical reasons an exception should be made in the case of certain histological topics it seems best to begin the microscopical work with the study of some simple tissues such as the stratum corneum cartilage and perhaps also blood connective tissue and unstriated muscle fiber before attempting the study of cross sections of such complex structures as the alimentary canal and the kidney By following the sequence of topics in this manual all the study of gross anatomy excepting the work on the circulatory system and the skeleton may be done with a single specimen In connection with the laboratory work the student should read the corresponding portions of Holmes Biology of the Frog As a rule the reading on a given topic should follow rather than precede the laboratory study of that topic In case time is limited the work may be shortened by a judicious omission of topics The chapters on the eye and the ear the thyroid glands and even the skeleton and the muscles may be omitted without serious detriment to the remainder of the work In case material is limited an entire frog may be saved for each student by omitting the special dissection of the venous system About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
