Enhancing Urban Environment by Environmental Upgrading and Restoration Jiri Marsalek,2004-09-16 The fusion of algebra analysis and geometry and their application to real world problems have been dominant themes underlying mathematics for over a century Geometric algebras introduced and classified by Clifford in the late 19th century have played a prominent role in this effort as seen in the mathematical work of Cartan Brauer Weyl Chevelley Atiyah and Bott and in applications to physics in the work of Pauli Dirac and others One of the most important applications of geometric algebras to geometry is to the representation of groups of Euclidean and Minkowski rotations This aspect and its direct relation to robotics and vision will be discussed in several chapters of this multi authored textbook which resulted from the ASI meeting Moreover group theory beginning with the work of Burnside Frobenius and Schur has been influenced by even more general problems As a result general group actions have provided the setting for powerful methods within group theory and for the use of groups in applications to physics chemistry molecular biology and signal processing These aspects too will be covered in detail With the rapidly growing importance of and ever expanding conceptual and computational demands on signal and image processing in remote sensing computer vision medical image processing and biological signal processing and on neural and quantum computing geometric algebras and
