Miller Highway Project Between West 59th Street to West 72nd Street, New York County ,2000

Infrastructure and Technology Management Tugrul U. Daim, Leong Chan, Judith Estep, 2018-01-10 This book presents emerging technology management approaches and applied cases from leading infrastructure sectors such as energy healthcare transportation and education Featuring timely topics such as fracking technology electric cars Google s eco friendly mobile technology and Amazon Prime Air the volume s contributions explore the current management challenges that have resulted from the development of new technologies and present tools applications and frameworks that can be utilized to overcome these challenges Emerging technologies make us rethink how our infrastructure will look in the future Solar and wind generation for example have already changed the dynamics of the power sector While they have helped to reduce the use of fossil fuels they have created management complications due to their intermittent natures Meanwhile information technologies have changed how we manage healthcare making it safer and more accessible but not without implications for cost and administration Autonomous cars are around the corner On line education is no longer a myth but still a largely unfulfilled opportunity Digitization of car ownership is achievable thanks to emerging business models leveraging new communication technologies The major challenge is how to evaluate the relative costs and benefits of these technologies This book offers insights from both researchers and industry practitioners to address this challenge and anticipate the impact of new technologies on infrastructure now and in the future New York's Highway System David T. Hartgen, 1999 **Judd Road Connector Transportation Improvements, New York Mills, New Hartford, and Whitestown, Funding and COE Section 404 Permits ,1998** **Routes 120 and 22/Exits 2 and 3 on I-684, Town of North Castle, Westchester County ,2001** **Intelligent Freeway Transportation Systems** Robert Gordon, 2009-10-06 Intelligent Freeway Transportation Systems Functional Design focuses on the efficient use of resources in the design of ITS It discusses the principles of top down design starting with objectives and requirements and provides guidance for the development and evaluation of functional design alternatives according to cost effectiveness principles It shows how transportation planning principles such as Wardrop s Laws and traffic diversion principles relate to functional ITS device selections and equipment locations Methodologies for translating objectives to functional device types are provided Application factors to identify device deployment densities e g number of detectors per mile as a function of traffic conditions are provided as are evaluation models for evaluating the benefits of design alternatives based on traffic conditions Design guidance and benefits evaluation include the following functions 1 Non recurrent congestion Improvement of incident clearance time 2 Non recurrent congestion Incident information to motorists 3 Recurrent congestion Information to motorists 4 Ramp metering 5 Motorist service patrols Asset Management of Bridges Khaled M Mahmoud, 2017-08-10 Maintaining bridges in good condition has extended service life and proven to be more cost effective than allowing degradation to

advance necessitating costlier bridge rehabilitation or replacement projects Preventive maintenance is therefore an important tool to retard deterioration and sustain the safe operation of bridges This includes a continuous effort of periodic inspections condition evaluations and prioritizing repairs accordingly The above measures define the framework for asset management of bridges On August 21-22, 2017 bridge engineering experts from around the world convened at the 9th New York City Bridge Conference to discuss issues of construction design inspection monitoring preservation and rehabilitation of bridge structures This volume documents their contributions to the safe operation of bridge assets **Intelligent**

Transportation Systems Robert Gordon, 2015-11-02 Intelligent Transportation Systems Functional Design for Economical and Efficient Traffic Management provides practical guidance on the efficient use of resources in the design of ITS The author explains how functional design alternatives can meet project objectives and requirements with optimal cost effectiveness and clarifies how transportation planning and traffic diversion principles relate to functional ITS device selections and equipment locations Methodologies for translating objectives to functional device types determining device deployment densities and determining the best placement of CCTV cameras and message signs are provided as are models for evaluating the benefits of design alternatives based on traffic conditions Readers will learn how to reduce recurrent congestion improve incident clearance time in non-recurrent congestion provide real time incident information to motorists and leverage transportation management center data for lane control through important new active transportation and demand management ATDM methods Finally the author examines exciting developments in connected vehicle technologies exploring their potential to greatly improve safety mobility and energy efficiency This resource will greatly benefit all ITS designers and managers and is of pivotal importance for operating agencies performing evaluations to justify operational funding and system expansions **Information Technology for Efficient Project Delivery** John J. Evaluation and Maintenance of Suspension Bridges Case Studies Sreenivas Alampalli, William J. Moreau, 2015-11-05 An Insiders Guide to Inspecting Maintaining and Operating Bridges Suspension bridges are graceful aesthetic and iconic structures Due to their attractiveness and visibility they are well known symbols of major cities and countries in the world They are also essential form of transportation infrastructure built across large bodies of water D *Best Practices in Right-of-Way Valuations and Negotiation Report*, 2007 In order to recommend some best practices for successful valuation and negotiation the research team considered property owners experiences different practices among Texas Department of Transportation district offices factors that may affect possession type as well as a thorough literature review Guidelines

supported by recommended practices and practices to avoid were identified for each valuation and negotiation. The guidelines and practices focused on promoting good relations between the Texas Department of Transportation and property owners.

Design and Performance Verification of UHPC Piles for Deep Foundations Thomas L. Vande Voort, Muhannad T. Suleiman, Sri Sritharan, 2008

The strategic plan for bridge engineering issued by AASHTO in 2005 identified extending the service life and optimizing structural systems of bridges in the United States as two grand challenges in bridge engineering with the objective of producing safer bridges that have a minimum service life of 75 years and reduced maintenance cost. Material deterioration was identified as one of the primary challenges to achieving the objective of extended life. In substructural applications e.g. deep foundation construction materials such as timber, steel and concrete are subjected to deterioration due to environmental impacts. Using innovative and new materials for foundation applications makes the AASHTO objective of 75 years service life achievable. Ultra High Performance Concrete (UHPC) with compressive strength of 180 MPa (26 000 psi) and excellent durability has been used in superstructure applications but not in geotechnical and foundation applications. This study explores the use of precast prestressed UHPC piles in future foundations of bridges and other structures. An H shaped UHPC section which is 10 in (250 mm) deep with weight similar to that of an HP 10x57 steel pile was designed to improve constructability and reduce cost. In this project instrumented UHPC piles were cast and laboratory and field tests were conducted. Laboratory tests were used to verify the moment curvature response of UHPC pile section. In the field two UHPC piles have been successfully driven in glacial till clay soil and load tested under vertical and lateral loads. This report provides a complete set of results for the field investigation conducted on UHPC H shaped piles. Test results, durability, drivability and other material advantages over normal concrete and steel indicate that UHPC piles are a viable alternative to achieve the goals of AASHTO strategic plan.
