Nichols, 2014-07-22 A landmark book by marine biologist Wallace J. Nichols on the remarkable effects of water on our health and well-being. Why are we drawn to the ocean each summer? Why does being near water set our minds and bodies at ease? In *Blue Mind*, Wallace J. Nichols revolutionizes how we think about these questions, revealing the remarkable truth about the benefits of being in, on, under, or simply near water. Combining cutting-edge neuroscience with compelling personal stories from top athletes, leading scientists, military veterans, and gifted artists, he shows how proximity to water can improve performance, increase calm, diminish anxiety, and increase professional success. *Blue Mind* not only illustrates the crucial importance of our connection to water; it provides a paradigm-shifting blueprint for a better life on this Blue Marble we call home. *Underwater Medicine and Related Sciences* Charles Wesley Shilling, 2012-12-06 This volume follows and updates AN ANNOTATED BIBLIOGRAPHY ON DIVING AND SUBMARINE MEDICINE published by Gordon and Breach Science Publishers Inc. in 1971. The time period covered is primarily the calendar years 1970 and 1971. Also included, however, is much material from the calendar years 1968 and 1969 not in the previous publication. A brief analysis of the sources of material precedes the citations and abstracts, which comprise the main section of the volume. The bibliography is followed by a permuted subject index and an author index. Also included following the indexes is a micro thesaurus. Although no attempt has been made to do a critical subject analysis, such an analysis could be accomplished through selecting a particular subject, looking up the appropriate key works in the rotated index, identifying the abstracts, analyzing them, obtaining complete copy as desired, and completing the critical review. Education in Science Teacher Education Alec Bodzin, Beth Shiner Klein, Starlin Weaver, 2010-08-13 In the coming decades, the general public will be required ever more often to understand complex environmental issues, evaluate proposed environmental plans, and understand how individual decisions affect the environment at local to global scales. Thus, it is of

fundamental importance to ensure that higher quality education about these ecological issues raises the environmental literacy of the general public In order to achieve this teachers need to be trained as well as classroom practice enhanced This volume focuses on the integration of environmental education into science teacher education The book begins by providing readers with foundational knowledge of environmental education as it applies to the discipline of science education It relates the historical and philosophical underpinnings of EE as well as current trends in the subject that relate to science teacher education Later chapters examine the pedagogical practices of environmental education in the context of scienceteacher education Case studies of environmental education teaching and learning strategies in science teacher education and instructional practices in K 12 science classrooms are included This book shares knowledge and ideas about environmental education pedagogy and serves as a reliable guide for both science teacher educators and K 12 science educators who wish to insert environmental education into science teacher education Coverage includes everything from the methods employed in summer camps to the use of podcasting as a pedagogical aid Studies have shown that schools that do manage to incorporate EE into their teaching programs demonstrate significant growth in student achievement as well as improved student behavior This text argues that the multidisciplinary nature of environmental education itself requires problem solving critical thinking and literacy skills that benefit students work right across the curriculum

Greatest Hits of Environmental Education, 1993 Descriptions of model environmental education projects that were funded by the Environmental Education Grant Program in California from 1983 through 1991 Projects were selected for grants by fitting specific environmental education criteria The programs encourage efforts and innovations at the school district level to help students learn about their interrelationships with the natural and human environment practice making decisions which enhance the quality of life and learn to conserve energy and other natural resources Emphasis is placed on partnerships with local community resources and rethinking science curriculums Grant projects were also encouraged to restructure curriculum to integrate learning across disciplines and ages Projects are clearly coded with the environmental concepts emphasized and include a description of the project the grades appropriate for the activities the year the grant was used and school contact information Projects are designed for a range of ages from kindergarten through high school
