Hurlburt,2012-12-06 What are the basic data of psychology In the early years of experimental psychology they were reports of brighter or heavier or other esti mates of the magnitude of differences between the sensory stimuli pre sented in psychophysical experiments Introspective accounts of the ex perience of seeing colored lights or shapes were important sources of psychological data in the laboratories of Cornell Harvard Leipzig or Wiirzburg around the tum of the century In 1910 John B Watson called for the objectification of psychological research even parodying the typical subjective introspective reports that emerged from Edward Bradford Titchener s laboratory For almost fifty years psychologists largely eschewed subjective information and turned their attention to observable behavior Rats running mazes or pigeons pecking

away on varied schedules of reinforcement became the scientific prototypes for those psychologists who viewed themselves as doing science. Psychoanalysts and clinical psychologists sustained interest in the personal reports of patients or clients as valuable sources of data for research. For the psychologists, questionnaires and projective tests that allowed for quantitative analysis and psychometrics seemed to circumvent the problem of subjectivity. Sigmund Freud's introduction of ongoing free association became the basis for psychoanalysis as a therapy and as a means of learning about human psychology. Slips of the tongue, thought intrusions, fantasies, hesitations, and sudden emotional expressions became the data employed by psychoanalysts in formulating hypotheses about resistance, memory transference, and a host of presumed human wishes and conflicts.
