Education Versus Qualifications? John Oxenham,2024-09-18 Originally published in 1984 this book investigates the validity of educational qualifications how they are determined what justifications exist for them and how they change It examines the assumption linking education and productivity and explores the belief that the ways in which scholastic qualifications are acquired distort education In the investigations the labour market the school and community are not treated as black boxes with no questions asked of their contents Each is opened and placed under the microscope Human resource personnel are asked to explain qualifications and selection for jobs Supervisors are asked to estimate the quality of their workers Teachers are observed in classrooms Parents are asked what they hope for when they send their children to school Simultaneously research from a wide range of countries and cultures is explored

Integrated Models of Cognitive Systems Wayne D. Gray,2007-04-19 The field of cognitive modeling has progressed beyond modeling cognition in the context of simple laboratory tasks and begun to attack the problem of modeling it in more complex realistic environments such as those studied by researchers in the field of human factors The problems that the cognitive modeling community is tackling focus on modeling certain problems of communication and control that arise when integrating with the external environment factors such as implicit and explicit knowledge emotion cognition and the cognitive system These problems must be solved in order to produce integrated cognitive models of moderately complex tasks Architectures of cognition in these tasks focus on the control of a central system which includes control of the central processor itself initiation of functional processes such as visual search and memory retrieval and harvesting the results of these functional processes Because the control of the central system is conceptually different from the internal control required by individual functional processes a complete architecture of cognition must incorporate two types of theories of control Type 1 theories of the structure functionality and operation of the controller and type 2 theories of the internal control of functional processes including how and what they communicate to the controller This book presents the current state of the art for both types of theories as well as contrasts among current approaches to human performance models It will be an important resource for professional and student researchers in cognitive science cognitive engineering and human factors Contributors Kevin A Gluck Jerry T Ball Michael A Krusmark Richard W Pew Chris R Sims Vladislav D Veksler John R Anderson Ron Sun Nicholas L Cassimatis Randy J Brou Andrew D Egerton Stephanie M Doane Christopher W Myers Hansjorg Neth Jeremy M Wolfe Marc Pomplun Ronald A Rensink Hansjorg
