Science the "write" Way Jodi Wheeler-Toppen, 2011 Writing skills are high on the list of real world requirements for all students. Including science students. Every scientific discipline needs professionals who can ably communicate in writing. Scientists must be able to describe their proposed studies for funding considerations, track their observations and results in their own notes, describe their experimental protocols for their peers to replicate and synthesize their work to the wider world community.

Animals in Environmental Education Teresa Lloro-Bidart, Valerie S. Banschbach, 2019-01-04 This book explores interdisciplinary approaches to animal focused curriculum and pedagogy in environmental education with an emphasis on integrating methods from the arts, humanities and natural and social sciences. Each chapter, whether addressing curriculum, pedagogy or both, engages with the extant literature in environmental education and other relevant fields to consider how interdisciplinary curricular and pedagogical practices shed new light on our understandings of and ethical moral obligations to animals. Embracing theories like intersectionality, posthumanism, Indigenous cosmologies and significant life experiences and considering topics such as equine training, meat consumption and production, urban human animal relationships and zoos and aquariums, the chapters collectively contribute to the field by foregrounding the lives of animals. The volume purposefully steps forward from the historical marginalization of animals in educational research and practice.

Teaching and Learning Online Franklin S. Allaire, Jennifer E. Killham, 2023-01-01 Science is unique among the disciplines since it is inherently hands on. However, the hands on nature of science instruction also makes it uniquely challenging when teaching in virtual environments. How do we as science teachers deliver high quality experiences to secondary students in an online environment that leads to age grade level appropriate science content knowledge and literacy but also collaborative experiences in the inquiry process and the nature of science? The expansion of online environments for education poses logistical and pedagogical challenges for early childhood and elementary science teachers and early learners. Despite digital media becoming more available and ubiquitous and increases in online spaces for teaching and learning, Killham et al 2014, Wong et al 2018, PreK-12 teachers consistently report feeling underprepared or overwhelmed by online learning environments. Molnar et al 2021, Seaman et al 2018. This is coupled with persistent challenges related to elementary teachers' lack of confidence and low science teaching self-efficacy. Brigid Borrachero Bermejo Gunning Duran Duran 2004. Ideal for undergraduate teacher candidates, graduate students, teacher educators, classroom teachers, parents and administrators, this book addresses why and how teachers use online environments to teach science content and work with elementary students through a research based foundation.

Learning Science in the Schools Shawn M.

Glynn, Reinders Duit, 2012-10-12 Science and the technology derived from it is having a dramatic impact on the quality of our personal lives and the environment around us. Science will have an even greater impact on the lives of our students. The lives of scientifically literate students will be enriched by their understanding, appreciation and enjoyment of the natural world. To

prosper in the near future all students must become scientifically literate and embrace the notion of life long learning in science Without scientific literacy it will become impossible for students to make informed decisions about the interrelated educational scientific and social issues that will confront them in the future Intended for science teachers teacher educators researchers and administrators this volume is concerned with the innovative research that is reforming how science is learned in schools The chapters provide overviews of current research and illustrate how the findings of this research are being applied in schools This research based knowledge is essential for effective science instruction The contributors are leading authorities in science education and their chapters draw clear connections among research theory and classroom practice They provide excellent examples from science classes in which their research has reformed practice This book will help educators develop the scientific literacy of students It bridges the gap between cutting edge research and classroom practice to provide educators with the knowledge they need to foster students scientific literacy
