case studies pertaining to the use of sustainable technologies for heavy metal removal and recovery from mining and
metallurgical wastes construction and demolition wastes spent catalysts and electronic wastes Wastewaters from diverse
industrial and mining activities have caused pollution problems but these sectors also serve as a hotspot for metal recovery

in full scale operation while metal recovery which is beneficial for economic and environmental reasons is still limited due to
challenges arising from downstream processing For instance microbial recovery bioleaching of metals from their ores is an
established technology with a number of full scale applications Bioleaching of electronic wastes to recover metals is also a
highly promising technology with low environmental impact and high cost effectiveness yet this technology is still at its
infancy As the individual chapters of this book focuses on the applications and limitations of different technologies this book
will serve as an excellent resource for chemical engineers environmental engineers mining engineers biotechnologists
