World Health Organization

Production Of Manual Sprayers And Spares:

Operational manual on indoor residual spraying World Health Organization,2024-02-13 Indoor residual spraying IRS involves applying residual insecticide to potential vector resting sites on the interior surfaces of human dwellings or other buildings The main aim of IRS is to kill vectors before they are able to transmit pathogens to humans When carried out correctly IRS has historically been shown to be a powerful intervention to reduce adult vector density and longevity for mosquitoes sand flies and triatomine bugs and can reduce the transmission of vector borne diseases This operational manual is designed to provide guidance on the establishment management implementation reporting and evaluation of safe and effective IRS campaigns within the context of a locally adapted and sustainable vector control programme in line with the Global vector control response 2017 2030 It provides information according to current WHO recommendations and standards on IRS and recognizes that IRS can potentially target multiple diseases in areas where endophilic vectors coexist The key audience for this document is vector borne disease control programme managers and staff as well as implementing or private sector partners at the national provincial state or local levels who are responsible for the design planning or implementation of vector control operations

A Technical Manual for Parasitic Weed Research and Extension J. Kroschel,2013-12-01 Parasitic weeds of the families Cuscutaceae Orobanchaceae and Scrophulariaceae are considered to be among the major problems facing agriculture in the Tropics and Subtropics In the last decades enormous efforts have been made and success achieved by scientists all over the world in gaining a better understanding of their biology and ecology as well as of control methods However no substantial reduction of infestation has been achieved in the past and control strategies specific to the different parasites crops and farming systems must be further developed or adapted and realised among a wider farming population with suitable extension methods This Technical Manual provides up to date methodologies for various aspects of research and extension related to parasitic weed species of the genera Striga Alectra Orobanche and Cuscuta It has the intention to support scientists and extension workers of international and national research and extension institutes and universities who are either new to the subject or plan to apply further techniques they are not yet familiar with

Integrated Vector Management G. A. Matthews,2011-08-17 Diseases transmitted by insects continue to have a major impact on human populations Malaria dengue onchocerciasis sleeping sickness and leishmaniasis all adversely affect man Malaria is one of the most important causes of child mortality and reduces economic development in many countries with agricultural productivity often greatly reduced as many vectors are active in the wet season favourable for crop production Vector control is crucial to reduce the extent to which drugs are needed to treat the diseases as the parasite can become resistant or the drugs are often too expensive for those living in rural areas and urban slums most affected by these diseases Chemical control of vectors is often the only method that can reduce vector populations in a disease epidemic but with vectors developing resistance to insecticides there is increasing awareness that a single control method is often insufficient

and also that chemical control must be integrated where possible with other control measures In Integrated Vector Management Graham Matthews covers the main chemical methods of vector control including the use of indoor residual spraying space treatments the use of treated bed nets and larviciding but also stresses the importance of drainage schemes and improvement of houses to prevent access of indoor vectors techniques that have largely been responsible for reducing the risk of vector borne diseases in Europe and the USA This book combines practical information from successful vector control programmes including early use of DDT and recent research into a vital resource for all those now involved in combating insect vector borne diseases Integrated Vector Management is an essential tool not only for medical entomologists and those directly involved in government health departments but also for all those who provide the skills and management needed to operate successful area wide vector management programmes Libraries in all universities and research establishments world wide where biological sciences medicine and agriculture are studied and taught should have multiple copies of this important book

Pesticide Application Methods Graham Matthews, 2008-04-15 Pesticide Application Methods is the standard work for all those involved in crop protection This fully revised edition provides up to date information on the different types of application techniques and how they should be used to ensure efficient and effective pest control Detailed information is provided on the role of chemical control in crop protection targets formulations and droplets spray quality and the choice of nozzles are discussed as are improvements in the design of new equipment safety precautions and maintenance issues Two new chapters highlight the application of biological pesticides and equipment used in the evaluation of pesticides This important new edition is a commercially important reference tool and will be of great use and interest to all those working in crop protection including agricultural entomologists and plant pathologists pesticide scientists advisors and consultants large scale growers agricultural and horticultural scientists agrochemical industry personnel including those involved in equipment supply and product formulation Libraries in government and commercial research establishments universities and agricultural colleges and anywhere the subject is taught or studied should have multiple copies of this definitive book on their shelves *International Commerce* ,1966 *Annual Report of the Commissioner of Patents to the Secretary of Commerce for the Fiscal Year Ended ...* United States. Patent Office, 1924
