

ICP Second Semester Test Review

The following is a list of the test reviews I have given to you for each chapter this semester. You should already have the answers to these questions as we reviewed them in class together during each chapter. I have changed the math problems, so that you can work them out with new numbers. As you study for the semester test, I would suggest you review the test reviews you have already completed for each chapter. Then use the following as practice test questions. On questions you already know, skip over them, focus on the material that you need to review. The only new material on this list are the questions from the Energy Unit at the end.

,1988 **Landmark Papers in Neurosurgery** Reuben D. Johnson,Alexander L. Green,2014 Evidence based medicine is a concept that has come to the fore in the past few years Clinicians are increasingly encouraged to practise patient management based on available evidence in the scientific literature For example new pharmacological therapies are only used when large randomized trials have proven that a particular drug is better than existing ones This is also the case in surgical specialties although surgery has traditionally seen a lack of use of this information with individual surgeon s preferences being most influential in treatment choices However more recently there has been a large expansion of trials and studies aimed at providing surgeons with information to guide their choices using firm evidence This new edition has been revised and expanded to include new data where relevant and also features a new chapter on pituitary surgery Landmark Papers in Neurosurgery 2e remains a key collection of the most important trials and studies in neurosurgery allowing the reader to rapidly extract key results and making it essential reading for all neurosurgeons and trainees in the field
