How to Teach Maths Steve Chinn,2020-11-23 How to Teach Maths challenges everything you thought you knew about how maths is taught in classrooms Award winning author Steve Chinn casts a critical eye over many of the long established methods and beliefs of maths teaching Drawing from decades of classroom experience and research he shows how mathematics teaching across the whole ability range can be

radically improved by learning from the successful methods and principles used for the bottom quartile of achievers the outliers Chinn guides readers through re adjusting the presentation of maths to learners considering learners needs first and explains the importance of securing early learning to create a conceptual foundation for later success This highly accessible book uses clear diagrams and examples to support maths teachers through many critical issues including the following The context of maths education today Topics that cause students the most difficulty Effective communication in the mathematics classroom Addressing maths anxiety The perfect resource for maths teachers at all levels this book is especially useful for those wanting to teach the foundations of mathematics in a developmental way to learners of all ages and abilities It has the potential to change the way maths is taught forever *Educating Indigenous Children in Australian Juvenile Justice Systems* Bronwyn Ewing, Grace Sarra, 2023-02-06 This book addresses key issues in the context of the national policy of educating children accused of crimes in Juvenile Courts in Australia For several decades National and State Governments in Australia have struggled to define education constantly seeking to improve the way society applies the concept This book presents an accurate portrayal of consequences of the education policy of trying to educate troubled children and young people in trouble with the law It describes the work of juvenile detention centre mathematics teachers and their teaching contexts It portrays teachers as learners who ventured with researchers with a theoretical perspective This book focuses on culturally responsive pedagogies that seek to understand the ways Indigenous children and young people in juvenile detention make sense of their mathematical learning which until the time of detention has been plagued by failure It examines how the underperformance of Aboriginal and Torres Strait Islander students and students from low socioeconomic backgrounds are strong determinants of their overrepresentation in the juvenile justice system in Australia This book presents the argument that if the students literacy and numeracy levels can be improved there is opportunity to build better futures away from involvement in the juvenile justice system and towards productive employment to improve life chances Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at

demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon's bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e.g. transitivity

Mathematics Curriculum in School Education Yeping Li, Glenda Lappan, 2013-11-19 Mathematics curriculum which is often a focus in education reforms has not received extensive research attention until recently Ongoing mathematics curriculum changes in many education systems call for further research and sharing of effective curriculum policies and practices that can help lead to the improvement of school education This book provides a unique international perspective on diverse curriculum issues and practices in different education systems offering a comprehensive picture of various stages along curriculum transformation from the intended to the achieved and showing how curriculum changes in various stages contribute to mathematics teaching and learning in different educational systems and cultural contexts The book is organized to help readers learn not only from reading individual chapters but also from reading across chapters and sections to explore broader themes including Identifying what is important in mathematics for teaching and learning in different education systems Understanding mathematics curriculum and its changes that are valued over time in different education systems Identifying and analyzing effective curriculum practices Probing effective infrastructure for curriculum development and implementation *Mathematics Curriculum in School Education* brings new insights into curriculum policies and practices to the international community of mathematics education with 29 chapters and four section prefaces contributed by 56 scholars from 14 different education systems This rich collection is indispensable reading for mathematics educators researchers curriculum developers and graduate students interested in learning about recent curriculum development research and practices in different education systems It will help readers to reflect on curriculum policies and practices in their own education systems and also inspire them to identify and further explore new areas of curriculum research for improving mathematics teaching and learning
