Martin, 2013-03-01 This book is a critically important contribution to the work underway to transform schooling for students who have historically been denied access to a quality education specifically African American children The first section of the book provides some historical perspective critical to understanding the current state of education in the U S specifically for the education of African American children The following sections include chapters on policy learning ethnomathematics student identity and teacher preparation as it relates to the mathematical education of Black children Through offering counternarratives about mathematically successful

Black youth advocating for a curriculum that is grounded in African American culture and ways of thinking providing shining examples of the brilliance of Black students and promoting high expectations for all rather than situating students as the problem the authors of this book provide powerful insights related to the teaching and learning of mathematics for African American students As is made evident in this book effective teaching involves much more than just engaging students in inquiry based pedagogy Kitchen 2003 The chapters offered in this book demonstrate how mathematics instruction for African American students needs to take into account historical marginalization and present day policies that do harm to Black students Kunjufu 2005 Empowering mathematics instruction for African American students needs to take into consideration and promote students cultural spiritual and historical identities Furthermore mathematics instruction for African American students should create opportunities for students to express themselves and the needs of their communities as a means to promote social justice both within their classrooms and communities

Differential Equations on Complex Manifolds Boris Sternin, Victor Shatalov, 2013-03-09 The present monograph is devoted to the complex theory of differential equations Not yet a handbook neither a simple collection of articles the book is a first attempt to present a more or less detailed exposition of a young but promising branch of mathematics that is the complex theory of partial differential equations Let us try to describe the framework of this theory First simple examples show that solutions of differential equations are as a rule ramifying analytic functions and hence are not regular near points of their ramification Second bearing in mind these important properties of solutions we shall try to describe the method solving our problem Surely one has first to consider differential equations with constant coefficients The apparatus solving such problems is well known in the real theory of differential equations this is the Fourier transformation Unfortunately such a transformation had not yet been constructed for complex analytic functions and the authors had to construct by themselves This transformation is of course the key notion of the whole theory

The Method of Response Function in Psychology & Sociology Irina G. Malkina-Pykh, Y. A. Pykh, 2013 Social psychological and sociological systems present considerable difficulties for modellers due to their complexity multidimensionality uncertainty and irreducibility The book proposes that response functions MRF be used as a method of constructing purposeful credible and integrated social systems models from data and prior knowledge or information A semi empirical or grey box MRF model may be regarded as a trade off between a knowledge based model and a black box empirical model It may embody all the existing knowledge on the process or a part thereof and in addition it relies on parameterised functions whose parameters are determined from measurements Observations contain hidden information on the processes under consideration and one of the main purposes of the proposed method is to extract and describe these hidden relationships Parameterisation offers ways to couple qualitative with quantitative analysis This combination makes it possible to take into account all the phenomena that are not modelled with the required accuracy through prior knowledge Although only a simplified picture of the processes is modelled a grey box system model provides some insight into the

system processes These processes are featured by chains of causality highlighting stressors and variables responsive to stressors The method of response functions is a nonlinear regression method that implies credible models in the sense that they are identifiable and hopefully explain system output behaviour satisfactorily For case studies the authors have selected the problems usually studied by psychologists and sociologists with statistical procedures such as investigation of variance and discriminant analysis based on the general linear model or one of its multivariate generalisations structural equation models etc disordered eating and obesity subjective well being and alexithymia An accompanying CD ROM contains the demonstration versions of three models that are discussed in the various chapters The Method of Response Functions in Psychology and Sociology is aimed at Mathematical Psychologists Mathematical Sociologists Applied Psychologists Sociologists and Social Practitioners It will also be suitable for use on undergraduate as well as graduate and postgraduate courses specializing in these areas
