1. An ionic bond is an attraction between oppositely charged ions.
2. Anions have a negative charge.
3. An atom becomes an ion by losing or gaining electrons.
4. The octet rule states that atoms tend to gain, lose, or share electrons in order to acquire a full set of valence electrons.
5. When sodium and chlorine form an ionic bond, both ions acquire the electron configuration of a(n) noble gas.
6. The atoms that make up polyatomic ions are bonded together by covalent bonds.
7. The crisscross method can be used to write the formula for an ionic compound.
8. The empirical formula of a compound denotes the ratio of ions in the compound.

If the statement is true, write "true." If it is false, change the underlined word or words to make it true. Write your answer on the line.

**Addison-Wesley Introduction to Physical Science** Michael B. Leyden, 1988 *Designing Computer-Based Learning Materials* Alan Clarke, 2018-10-26 First published in 2001 this volume demonstrates how computer based learning has the potential to provide a highly motivating learning experience that it also has the potential to achieve exactly the opposite and that the difference between these two extremes is the quality of the learning design The challenge for the learning designer isn't a simple one You are being asked to prepare interactive learning for someone you can't see and with whom the only interaction you are likely to have is via limited written communication Fortunately help is at hand in Alan Clarke's *Designing Computer Based Learning Materials* Dr Clarke offers a definitive guide to each of the many elements involved in good design This book explores the principles of adult learning and relates to the potential features and impact of computer based learning This is not a how to book but rather one seeking to help you understand the different elements which go into computer based learning If you are commissioning material it will help you to understand the contractors constraints If you are designing materials yourself it will allow you to avoid many of the errors it is all too easy to make when developing them Computer based learning materials are not all the same their range reflects the variety of learners that use them and purposes they are used for the different learning environments that are available to people the different subjects that they wish to learn and the level to which they wish to take them In the face of such a complex task involving so many factors and variables it is essential that the learning designer understands what is involved and uses a rigorous process for envisioning planning designing implementing and testing their solution This is a book about learning design and not about software production and as such it provides any aspiring designers with the fundamentals of producing the highly motivating learning experience which should be their objective Load-Bearing Fibre Composites Michael R. Piggott, 2016-01-22 Load Bearing Fibre Composites provides a unified view of the entire field of fiber and platelet composites This book explores the complex interactions between fibers and matrix Organized into 12 chapters this book begins with an overview of the fundamental

ideas in the field of fiber reinforced composites This text then provides data on their load bearing capabilities Other chapters consider a rough estimate of how strong a material could be and describe the two main sources of weakness in real materials This book discusses as well the slender forms of material and describes the simple slip theory of reinforcement that gives the modulus and strength for aligned short fiber composites The final chapter deals with the versatile use of fiber reinforced materials which can be designed for a specific application by suitable choice of components and volume fraction This book is a valuable resource for materials scientists metallurgists designers engineers and research workers *Focus on Earth Science*, 2001 Boilermaker 1 & C.
