Work Projects Administration (Ohio),1931 Cognitive and affective control Gilles Pourtois,Wim Notebaert,Tom Verguts, Traditionally cognition and emotion are seen as separate domains that are independent at best and in competition at worst The French scientist and philosopher Blaise Pascal 1623 1662 famously said Le coeur a ses raisons que la raison ne connaît point The heart has its reasons that reason does not know Over the last century however psychologists and neuroscientists have increasingly appreciated their very strong reciprocal connections and interactions Initially this was demonstrated in cognitive functions such as attention learning and memory and decision making For instance an emotional stimulus captures attention e.g. Anderson Verguts Notebaert 2009 From this perspective cognitive control is not a cool encapsulated executive function but instead involves rapidly calculating the value of situational contextual and action cues Rushworth Behrens 2008 for the purpose of adapting the cognitive system toward future optimal performance A wide array of research has shed light on cognitive control and its interactions with affect or motivation Behaviorally important phenomena include how people respond to difficult stimuli e.g. incongruent stimuli task switches negative feedback or errors and how this influences subsequent task processing Neurally an important target structure has been the anterior cingulate cortex ACC and its connections to traditional emotional e.g. amygdala and cognitive areas e.g. pre motor cortex dorsolateral prefrontal cortex ACC seems to play a predominant role in integrating distant effects from remote cognitive and emotion systems in order to guide and optimize behavior The current special issue focuses on the bi directional link between emotion and cognitive control We invite studies that investigate the influence from emotion on cognitive control or vice versa the influence of cognitive control on emotion Contributions can be of different types We welcome empirical contributions behavioral or neuroscientific but also computational modeling theory or review papers By bringing together researchers from the traditionally separated domains we hope to further stimulate the crosstalk between emotion and cognitive control and thus to deepen our understanding of both New Mathematical Cuneiform Texts Jöran Friberg,Farouk N.H. Al-Rawi,2017-02-13

This monograph presents in great detail a large number of both unpublished and previously published Babylonian mathematical texts in the cuneiform script. It is a continuation of the work *A Remarkable Collection of Babylonian Mathematical Texts* (Springer 2007) written by J. R. Friberg, the leading expert on Babylonian mathematics. Focussing on the big picture, Friberg explores in this book several Late Babylonian arithmetical and metro-mathematical table texts from the sites of Babylon, Uruk, and Sippar; collections of mathematical exercises from four Old Babylonian sites; as well as a new text from Early Dynastic Early Sargonic Umma, which is the oldest known collection of mathematical exercises. A table of reciprocals from the end of the third millennium BC, differing radically from well-documented but younger tables of reciprocals from the Neo-Sumerian and Old Babylonian periods, as well as a fragment of a Neo-Sumerian clay tablet showing a new type of a labyrinth, are also discussed. The material is presented in the form of photos, hand copies, transliterations, and translations, accompanied by exhaustive explanations. The previously unpublished mathematical cuneiform texts presented in this book were discovered by Farouk Al Rawi, who also made numerous beautiful hand copies of most of the clay tablets. Historians of mathematics and the Mesopotamian civilization, linguists, and those interested in ancient labyrinths will find *New Mathematical Cuneiform Texts* particularly valuable. The book contains many texts of previously unknown types and material that is not available elsewhere.
