The Law of the Sea and Climate Change Elise Johansen, Signe Veierud Busch, Ingvild Ulrikke Jakobsen, 2020-12-17 Our oceans are suffering under the impacts of climate change Despite the critical role that oceans play in climate regulation international climate law and the law of the sea are developed as two different largely separate legal regimes The main objective of this book is to assess how the law of the sea can be interpreted developed and applied to support the objectives of the United Nations Climate Regime By identifying the potential and constraints of the law of the sea

regime in supporting and complementing the climate regime in the mitigation of and adaptation to climate change this book offers a new perspective on the law of the sea and its capacity to evolve to respond to systemic challenges and its potential to adapt and ensure a resilient and sustainable future [Climate Change 2014 – Impacts, Adaptation and Vulnerability: Part B: Regional Aspects: Volume 2, Regional Aspects](#) Intergovernmental Panel on Climate Change (IPCC), 2014-12-29 This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change IPCC will again form the standard reference for all those concerned with climate change and its consequences including students researchers and policy makers in environmental science meteorology climatology biology ecology atmospheric chemistry and environmental policy [Climate Change: Science, Strategies, and Solutions](#) Eileen Claussen, 2022-05-16 It is the greatest environmental challenge of the 21st Century But what do we truly know about global climate change And what can we do about it Most of the world's top scientists agree that emissions of carbon dioxide and other greenhouse gases from human activities such as industrial processes fossil fuel combustion and land use changes are causing the earth to get warmer Impacts of this warming may include damage to our coastal areas accelerated rates of species loss altered agricultural patterns and increased incidences of infectious diseases The effects of climate change and efforts to mitigate climate change could also have substantial economic ramifications The book presents the latest research and analysis from prominent scientists economists academics and policy makers including Tom Wigley and Joel Smith who along with other authors of the Science and Impacts chapter explain the basic science of climate change the growing evidence that human activities are changing our climate and the impacts of these changes Eileen Claussen John Gummer Henry Lee and other authors of the Global Strategies chapter who describe what nations are or are not doing to address climate change and the state of international climate talks Robert Stavins John Weyant Ev Ehrlich and other economists who explain why economic analyses of climate policy are conducted why the projected costs of addressing climate change vary so widely among economic models and how changes driven by today's economy can influence climate policy Gov Jean Shaheen and other authors of the Innovative Solutions chapter who describe what state and local governments in the United States and multinational companies are doing to monitor and curb greenhouse gas emissions and Forest Reinhardt who offers business leaders advice on steering their companies on a path that is healthy for business as well as the global climate This publication has also been published in paperback please click [here](#) for details **Challenges and Solutions for Climate Change** Wytze van der Gaast, Katherine Begg, 2012-05-22 The latest scientific knowledge on climate change indicates that higher greenhouse gas concentrations in the atmosphere through unchecked emissions will provoke severe climate change and ocean acidification Both impacts can fundamentally alter environmental structures on which humanity relies and have serious consequences for the food chain among others Climate change therefore poses major socio economic technical and environmental challenges which will have serious impacts on countries pathways towards sustainable development As a result climate change and sustainable development

have increasingly become interlinked A changing climate makes achieving Millennium Development Goals more difficult and expensive so there is every reason to achieve development goals with low greenhouse gas emissions This leads to the following five challenges discussed by Challenges and Solutions for Climate Change 1 To place climate negotiations in the wider context of sustainability equity and social change so that development benefits can be maximised at the same time as decreasing greenhouse gas emissions 2 To select technologies or measures for climate change mitigation and adaptation based on countries sustainable development and climate goals 3 To create low greenhouse gas emission and climate resilient strategies and action plans in order to accelerate innovation needed for achieving sustainable development and climate goals on the scale and timescale required within countries 4 To rationalize the current directions in international climate policy making in order to provide coherent and efficient support to developing countries in devising and implementing strategies and action plans for low emission technology transfers to deliver climate and sustainable development goals 5 To facilitate development of an international framework for financial resources in order to support technology development and transfer improve enabling environments for innovation address equity issues such as poor people s energy access and make implementation of activities possible at the desired scale within the country The solutions presented in Challenges and Solutions for Climate Change show how ambitious measures can be undertaken which are fully in line with domestic interests both in developing and in developed countries and how these measures can be supported through the international mechanisms
