

Problems of the Month Distributing Return

The Problems of the Month (POM) are used in a variety of ways to promote problem solving and to foster the best standard of mathematical practice from the Common Core State Standards: "Make sense of problems and persevere in solving them." The POM may be used by a teacher to promote problem solving and to address the differentiated needs of her students. A department or grade level may engage their students in a POM to showcase problem solving as a key aspect of doing mathematics. POMs can also be used within schools to promote a problem-solving theme at a school. The goal is for all students to have the experience of attacking and solving non-routine problems and developing their mathematical reasoning skills. Although obtaining and justifying solutions to the problems is the objective, the process of searching for viable problems to solve is also important.

The Problems of the Month is structured to provide reasonable tasks for all students in a school. The structure of a POM is a challenge that sets a high ceiling, so that all students can productively engage, struggle, and persevere. The Primary Version is designed to be accessible to all students and especially the low challenge for grades K - 5. Level A will be challenging for most second and third graders. Level B may be the limit of where fourth and fifth-grade students have success and understanding. Level C may stretch sixth and seventh-grade students. Level D may challenge most eighth and ninth-grade students, and Level E should be challenging for some high school students. These grade-level expectations are just indicators and should not be used as an absolute measure of expectation or measurement for students. Problem solving is a learned skill, and students may need many experiences in developing their reasoning skills, approaches, strategies, and the perseverance to be successful. The Problems of the Month builds on sequential levels of understanding. All students should experience Level A and then move through the tasks in order to go as deeply as they can into the problems. There will be those students who will not have access into even Level A. Educators should feel free to modify the task to allow access at some level.

Overview

In the Problems of the Month, Distributing Return, students use number operations, organized lists, and probability to solve problems. The mathematical topics that underlie this POM are knowledge of number sense, comparison, subtraction, division, ratios, rational numbers, and conceptual probability. The mathematics in this POM involves converting repeating decimals to fractions and using algebraic reasoning.

In the first level of this POM, students are presented with a situation that asks the students to determine the number of helpers needed to carry donuts. Each helper carries a certain amount. The students determine the number of helpers that are

Internationalization of Mathematics Between the Two World Wars Reinhard Siegmund-Schultze, 2012-12-06 Philanthropies funded by the Rockefeller family have been prominent in the social history of the twentieth century for their involvement in medicine and applied science This book provides the first detailed study of their relatively brief but nonetheless influential foray into the field of mathematics The careers of a generation of pathbreakers in modern mathematics such as S Banach B L van der Waerden and Andr Weil were decisively affected by their becoming fellows of the Rockefeller funded International Education Board in the 1920s To help promote cooperation between physics and mathematics Rockefeller funds supported the erection of the new Mathematical Institute in G ttingen between 1926 and 1929 while the rise of probability and mathematical statistics owes much to the creation of the Institut Henri Poincar in Paris by American philanthropy at about the same time This account draws upon the documented evaluation processes behind these personal and institutional involvements of philanthropies It not only sheds light on important events in the history of mathematics and physics of the 20th century but also analyzes the comparative developments of mathematics in Europe and the United States Several of the documents are given in their entirety as significant witnesses to the gradual shift of the centre of world mathematics to the USA This shift was strengthened by the Nazi purge of German and European mathematics after 1933 to which the Rockefeller Foundation reacted with emergency programs that subsequently contributed to the American war effort The general historical and political background of the events discussed in this book is

the mixture of competition and cooperation between the various European countries and the USA after World War I and the consequences of the Nazi dictatorship after 1933 Ideological positions of both the philanthropists and mathematicians mattered heavily in that process Cultural bias in the selection of fellows and of disciplines supported and the economic predominance of American philanthropy led among other things to a restriction of the programs to Europe and America to an uneven consideration of European candidates and to preferences for Americans Political self isolation of the Soviet Union contributed to an increasing alienation of that important mathematical culture from Western mathematics By focussing on a number of national cultures the investigation aims to represent a step toward a true inter cultural comparison in mathematics
