Device Forensics Chuck Easttom, 2021-10-21 Mobile devices are ubiquitous therefore mobile device forensics is absolutely critical Whether for civil or criminal investigations being able to extract evidence from a mobile device is essential This book covers the technical details of mobile devices and transmissions as well as forensic methods for extracting evidence There are books on specific issues like Android forensics or iOS forensics but there is not currently a book that covers all the topics covered in this book Furthermore it is such a critical skill that mobile device forensics is the most common topic the Author is asked to teach to law enforcement This is a niche that is not being adequately filled with current titles An In Depth Guide to Mobile Device Forensics is aimed towards undergraduates and graduate students studying cybersecurity or digital forensics It covers both technical and legal issues and includes exercises tests quizzes case studies and slides to aid comprehension

Das Buch zu Android-Tablets Hans Dorsch, 2013 Attraktive Einf hrung in das Arbeiten mit Android auf unterschiedlichen Tablet PCs Handbook of Blockchain Law Matthias Artzt, Thomas Richter, 2020-07-16 Blockchain has become attractive to companies and governments because it promises to solve the age old problem of mutability in transactions that is it makes falsification and recalculation impossible once a transaction has been committed to the technology However the perceived complexity of implementing Blockchain calls for an in depth overview of its key features and functionalities specifically in a legal context The systematic and comprehensive approach set forth in this indispensable book including coverage of existing relevant law in various jurisdictions and practical guidance on how to tackle legal issues raised by the use of Blockchain ensures a one stop shop reference book for anyone considering Blockchain based solutions or rendering advice with respect to them Within a clear structure by fields of law allowing for a systematic approach each contributor all of them are practitioners experienced with Blockchain projects within their respective areas of expertise elucidates the implications of Blockchain technology and related legal issues under such headings as the following technical explanation of Blockchain technology contract law regulatory issues and existing regulation in a variety of jurisdictions data protection and privacy capital markets information security patents and other intellectual property considerations and antitrust law Keeping the legal questions and concepts sufficiently generic so that lawyers can benefit from the handbook irrespective of their

jurisdiction and legal background the authors cover such specific characteristics of Blockchain implementation as so called smart contracts tokenization distributed ledger technology digital securities recognition of code as law data privacy challenges and Blockchain joint ventures Because Blockchain is a relatively new technology still in process and raises a multitude of legal questions this well balanced introduction at a depth that allows non IT experts to understand the groundwork for legal assessments provides a solid basis for organizations and their legal advisors in identifying and resolving Blockchain related issues Legal practitioners in house lawyers IT professionals and advisors consultancy firms Blockchain associations and legal scholars will welcome this highly informative and practical book **Lithium-Ion Cells** Yury Koshtyal ,Alexander Rumyantsev,2024-12-24 A large quantity of articles and books have been published on the designated topics However most of the literary sources describe the results of scientific articles on the synthesis and study of perspective materials reveal circuit and design solutions for constructing control systems and manufacturing batteries and are educational materials At the same time a small part of the published sources includes the following descriptions of materials produced industrially and used in the LIC manufacturing process demonstrations of the industrially produced LIC energy and power parameters analysis of the characteristics of manufactured miniature lithium ion cells solid state LICs lithium metal cells and all solid state cells as well as others Considering the popularity of the discussed topics one can hope to find detailed information on the Internet Indeed modern search engines make it possible to locate a sufficiently large number of relevant documents However while conducting such research we encountered the following challenges the data are somewhat fragmented and their systematization and structuring are required search results do not always meet search queries For instance data that were relevant to the topic were found but they did not match the query as accumulated data grow the search time for new information extends the choice of search engine and location different countries affects search results the data are not indexed in search engines although the correct keywords and website were requested the information disappears due to website updates and the found data require additional processing For example many presentations show changes in the shape of the discharge curves depending on the discharge current strength In addition however Ragone plots are necessary for a correct comparison and therefore the mathematical processing of presented results is required Thus this book was written to systematize and structure information on industrially produced materials for LIC manufacturing and industrially produced and promising LICs and lithium metal rechargeable cells for various applications *Virtual Reality and Augmented Reality* Patrick Bourdot,Victoria Interrante,Luciana Nedel,Nadia Magnenat-Thalmann,Gabriel Zachmann,2019-10-07 This book constitutes the refereed proceedings of the 16th International Conference on Virtual Reality and Augmented Reality EuroVR 2019 held in Tallinn Estonia in October 2019 The 11 full papers and 5 short papers presented together with 8 scientific posters were carefully reviewed and selected from 54 submissions The papers are organized in topical sections named Immersive Interaction Training Teaching and Learning Industrial Applications and Data Analysis
