The Contribution of Social Sciences to Sustainable Development at Universities Walter Leal Filho, Michaela Zint, 2016-01-06 This volume is the first of its kind to present contemporary state of the art examples of how social science theories models and findings can advance all aspects of campus sustainability an area that has so far been largely neglected The individual chapters reflect the broad diversity of research on sustainable campus development conducted within and across basic and applied social science disciplines drawing on a range of methods and case studies from around the world Institutions of higher education have been among the leading promoters of sustainable development However efforts to transition to sustainability have been largely dominated by technological solutions and universities and colleges are increasingly recognizing that this transition cannot be achieved without attention to the human dimension Administrators campus sustainability officers and other university staff faculty members and students as well as alumni and external constituents all help to shape which sustainability innovations and initiatives are considered and pursued and their participation determines the ultimate success of sustainability efforts The book s individual contributions illustrate how the social sciences can broaden visions of what may be possible identify the advantages and disadvantages of different instrumental and emancipator approaches evaluate interventions effectiveness and offer processes for learning from mistakes and successes in ways that support continuous advances toward sustainability Given that the majority of social science research stems from universities the level of trust in these institutions and their mission to develop societal leaders higher education institutions are ideally suited for testing assessing and modeling the social innovations needed to achieve sustainability on campuses and beyond

Proceedings of the Second International Conference on Mechatronics and Automatic Control Wego Wang, 2015-08-03 This book examines mechatronics and automatic control systems The book covers important emerging topics in signal processing control theory sensors mechanic

manufacturing systems and automation The book presents papers from the second International Conference on Mechatronics and Automatic Control Systems held in Beijing China on September 20 21 2014 Examines how to improve productivity through the latest advanced technologies Covering new systems and techniques in the broad field of mechatronics and automatic control systems **ICPMG2014 - Physical Modelling in Geotechnics** Christophe Gaudin, David

White, 2019-01-08 The 8th International Conference on Physical Modelling in Geotechnics ICPMG2014 was organised by the Centre for Offshore Foundation Systems at the University of Western Australia under the auspices of the Technical Committee 104 for Physical Modelling in Geotechnics of the International Society of Soil Mechanics and Geotechnical Engineering This quadrennial conference is the traditional focal point for the physical modelling community of academics scientists and engineers to present and exchange the latest developments on a wide range of physical modelling aspects associated with geotechnical engineering These proceedings together with the seven previous proceedings dating from 1988 present an inestimable collection of the technical and scientific developments and breakthroughs established over the last 25 years These proceedings include 10 keynote lectures from scientific leaders within the physical modelling community and 160 peer reviewed papers from 26 countries They are organised in 14 themes presenting the latest developments in physical modelling technology modelling techniques and sensors through a wide range of soil structure interaction problems including shallow and deep foundations offshore geotechnics dams and embankments excavations and retaining structures and slope stability Fundamental aspects of earthquake engineering geohazards ground reinforcements and improvements and soil properties and behaviour are also covered demonstrating the increasing complexity of modelling arising from state of the art technological developments and increased understanding of similitude principles A special theme on education presents the latest developments in the use of physical modelling techniques for instructing undergraduate and postgraduate students in geotechnical engineering **Solar Irradiance and Photovoltaic Power Forecasting** Dazhi Yang, Jan Kleissl, 2024-02-05

Forecasting plays an indispensable role in grid integration of solar energy which is an important pathway toward the grand goal of achieving planetary carbon neutrality This rather specialized field of solar forecasting constitutes both irradiance and photovoltaic power forecasting Its dependence on atmospheric sciences and implications for power system operations and planning make the multi disciplinary nature of solar forecasting immediately obvious Advances in solar forecasting represent a quiet revolution as the landscape of solar forecasting research and practice has dramatically advanced as compared to just a decade ago Solar Irradiance and Photovoltaic Power Forecasting provides the reader with a holistic view of all major aspects of solar forecasting the philosophy statistical preliminaries data and software base forecasting methods post processing techniques forecast verification tools irradiance to power conversion sequences and the hierarchical and firm forecasting framework The book s scope and subject matter are designed to help anyone entering the field or wishing to stay current in understanding solar forecasting theory and applications The text provides concrete and honest advice

methodological details and algorithms and broader perspectives for solar forecasting Both authors are internationally recognized experts in the field with notable accomplishments in both academia and industry Each author has many years of experience serving as editors of top journals in solar energy meteorology The authors as forecasters are concerned not merely with delivering the technical specifics through this book but more so with the hopes of steering future solar forecasting research in a direction that can truly expand the boundary of forecasting science *Hierarchical Object*

Leonardis, 2016-06-08 Over the past 40 years neurobiology and computational neuroscience has proved that deeper understanding of visual processes in humans and non human primates can lead to important advancements in computational perception theories and systems One of the main difficulties that arises when designing automatic vision systems is developing a mechanism that can recognize or simply find an object when faced with all the possible variations that may occur in a natural scene with the ease of the primate visual system The area of the brain in primates that is dedicated at analyzing visual information is the visual cortex The visual cortex performs a wide variety of complex tasks by means of simple operations These seemingly simple operations are applied to several layers of neurons organized into a hierarchy the layers representing increasingly complex abstract intermediate processing stages In this Research Topic we propose to bring together current efforts in neurophysiology and computer vision in order 1 To understand how the visual cortex encodes an object from a starting point where neurons respond to lines bars or edges to the representation of an object at the top of the hierarchy that is invariant to illumination size location viewpoint rotation and robust to occlusions and clutter and 2 How the design of automatic vision systems benefit from that knowledge to get closer to human accuracy efficiency and robustness to variations Computer Vision - ECCV 2014 Workshops Lourdes Agapito, Michael M. Toby Pennington, 2017-01-12 In this volume we aimed to assess progress in determining the processes by which current patterns of tropical biodiversity were established and are maintained Tropical regions are highly species rich and we present studies that have improved our understanding of the generation of that diversity at local regional and global scales We demonstrate how diverse fields from molecular phylogenetics phylogeography palaeontology and palaeoecology continue to improve our understanding of the natural history of the tropics **Genes and Behaviour** David J. Hosken, John Hunt, Nina Wedell, 2019-02-06 Provides a broad snapshot of recent findings showing how the environment and genes influence behavior The great debate of nature versus nurture rages on but our understanding of the genetic basis of many behaviors has expanded over the last decade and there is now very good evidence showing that seemingly complex behaviours can have relatively simple genetic underpinnings but also that most behaviours have very complicated genetic and environmental architecture Studies have also clearly shown that

behaviors and other traits are influenced not just by genes and the environment but also by the statistical interaction between the two This book aims to end the nature versus nurture argument by showing that behaviors are nature and nurture and the interaction between the two and by illustrating how single genes can explain some of the variation in behaviors even when they are seemingly complex Genes and Behaviour Beyond Nature Nurture puts to rest the nature versus nurture dichotomy providing an up to date synopsis of where we are how far we ve come and where we are headed It considers the effects of a dual inheritance of genes and culture and genes and social environment and highlights how indirect genetic effects can affect the evolution of behavior It also examines the effect of non self genes on the behavior of hosts shines a light on the nature and nurturing of animal minds and invites us to embrace all the complexity nature and nurture generates and more Explores exciting new findings about behavior and where we go from here Features contributions by top scholars of the subject Seeks to end the nature versus nurture debate forever Genes and Behaviour Beyond Nature Nurture is a unique and eye opening read that will appeal to Ph D Students post doctoral fellows and researchers in evolution and behavior Additionally the book will also be of interest to geneticists sociologists and philosophers Proceedings of the 2nd International Academic Conference on Blockchain, Information Technology and Smart Finance (ICBIS 2023) Jerome Yen, Mohammad Zoynul Abedin, Wan Azman Saini Bin Wan Ngah, 2023-07-25 This is an open access book With the rapid development of modern economy and Internet technology the traditional financial industry has to develop Internet finance to provide better services and meet the needs of the times It is against this background that the blockchain relying on its special advantages collective maintenance reliable databases and decentralization provides the reliability to solve the credit risk of Internet finance has an impact on institutions trust mechanisms risk control etc in the Internet finance industry and has derived more new application scenarios thus paving the way for the development of finance in the Internet era Applying blockchain technology to the financial field can promote data information sharing improve value transmission efficiency and enhance database security The financial market based on the decentralized system of blockchain technology can reduce the operating costs of financial institutions improve economic efficiency and solve problems such as information asymmetry The new financial business model of blockchain finance is conducive to improving the Internet credit reporting system preventing and controlling Internet financial risks and further realizing financial disintermediation At present in China s financial field blockchain technology has been applied and innovated in supply chain finance cross border payment trade finance asset securitization and other scenarios To promote the exchange and development of blockchain information technology and financial experts and scholars The 2nd International Academic Conference on Blockchain Information Technology and Smart Finance ICBIS 2023 will be held in Hangzhou from February 17 to 19 2023 This conference mainly focuses on the latest research on blockchain information technology and smart finance This conference brings together experts scholars researchers and relevant practitioners in this field from all over the world to share research results discuss hot issues and
