

(b) Give reasons for the following :

- (i) Photosynthesis is considered as a process supporting all life on earth.
- (ii) A matured mammalian erythrocyte lacks nucleus and mitochondria.
- (iii) Potato cubes when placed in water become firm and increase in size.
- (iv) Urine is slightly thicker in summer than in winter.
- (v) People living in hilly regions usually suffer from simple goitre.

[5]

Answer :

(a) (i) Cortex

- (ii) 1—Afferent arteriole  
3—Bowman's capsule.

2—Glomerulus

4—Efferent arteriole

(iii) Ultrafiltration

Selective reabsorption

Tubular secretion

(iv) Ultrafiltration.

Blood rich in nitrogenous waste and excess water enters Bowmans Capsule through a wider afferent arteriole then splits into fine capillaries called glomerulus due to which a hydrostatic pressure is created. This pressure leads to filtration of water with nitrogenous wastes.

(b) (i) Photosynthesis process leads to release of oxygen which is essential for all life on earth. It also produces food for all heterotrophs.

(ii) Lack of nucleus helps in having more surface area for absorption and transport of oxygen.

Lack of mitochondria helps in the way that RBC would not consume any oxygen that it is transporting.

(iii) Water is a hypotonic medium, so endosmosis occurs due to which water enters into potato cells making them firm and larger in size i.e., making them turgid.

(iv) In summer, body loses large amount of water by perspiration or direct evaporation. So blood is order to maintain its osmotic concentration reabsorbs large amount of water from the tubules of Nephron due to which there is less water left to be released as urine. So urine becomes thicker whereas in winter, there is less reabsorption. So thin urine is passed.

(v) In hilly areas there is scarcity of iodine in the soil and in their diet. Deficiency of iodine leads to simple goitre.

**12th Edition** Disha Experts, 2020-07-04 **Teacher Involvement in High-Stakes Language Testing** Daniel

Xerri, Patricia Vella Briffa, 2018-04-27 This book advocates that teachers should play an active role in high stakes language testing and that more weight should be given to teacher judgement This is likely to increase the formative potential of high stakes tests and provide teachers with a sense of ownership The implication is that the knowledge and skills they develop by being involved in these tests will feed into their own classroom practices The book also considers the arguments against teacher involvement e g the contention that teacher involvement might entrench the practice of teaching to the test or that teachers should not be actively involved in high stakes language testing because their judgement is insufficiently reliable Using contributions from a wide range of international educational contexts the book proposes that a lack of reliability in teacher judgement is best addressed by means of training and not by barring educators from participating in high stakes language testing It also argues that their involvement in testing helps teachers to bolster confidence in their own judgement and develop their assessment literacy Moreover teacher involvement empowers them to play a role in reforming high stakes language testing so that it is more equitable and more likely to enhance classroom practices High stakes language tests that adopt such an inclusive approach facilitate more effective learning on the part of teachers which ultimately benefits all their students **Learning to Teach in the Secondary School** Susan Capel, Marilyn Leask, Sarah Younie, 2013-08-15 Learning

**No One Left Standing** Michele Wages, 2016-11-14 Every public school student in the U S will experience various types of testing each year For decades the purpose and quality of such testing the time it takes to administer and take the test and how the data is used are the topic of discussion among students parents educators and policymakers Those supporting the importance of testing assume that more assessment improves student achievement and that the pros of testing outweigh their perceptions of the additional costs Those against excessive testing believe that schools are sacrificing learning time in order to test or prepare for the test They also believe that reduced learning time of non tested subjects occurs and more time is given to those students that are performing right below the proficiency score or bubble kids instead of developing every student s full potential Testing in U S public schools is out of control The stress and pressures for all involved have effects that are not even measurable in most instances Is this really the best thing for our schools Are there alternative measures that may serve our future in a better way Will the rewrite of NCLB be enough
