## Section 1 Study Human Populations:

*The History of Human Populations* P. M. G. Harris, 2001-07-30 From classic demographic theory to the best contemporary thinking this book will fruitfully replace previous ways of looking at population expansion and contraction The 50 years of scholarship that covers 2 1 2 millennia peoples in all parts of the world and aggregates from hamlets to the global level this volume shows that populations grow or decline according to six related patterns Looking at the path taken by unrestricted population growth the effects of limited resources demographic disaster population explosion and the implications of stable population theory and demographic transition for numerical trends Harris reinterprets and insightfully interconnects all of these via six related growth curves opening the way for a better understanding of how populations expand through changes in births deaths and migrations and how they interact with their economic social and physical environments All six trend types the book shows are shaped by forces internal to the dynamics of populations themselves Most frequently they increase in a constantly proportionally slowing curve as a specific stimulus is spent through expansion With shocks like war or epidemics they contract according to an upside down version of this curve The only two curves until recent times these are still the most common in local populations With modern economic and social change some populations mostly larger ones follow one of four newer growth patterns either increasing at a steady rate growing in a gradually slowing pattern between this constancy and the rapidly decelerating basic growth curve exploding in an accelerating fashion or in a few ominous cases decreasing in an accelerating decline Where these curves occur depends on the distinctive ways populations interact with economic changes Harris s findings have profound implications for understanding economic and social change These implications will be discussed in the following volume

*Human Population Academy: Laws Of Human Nature* Kate Bazilevsky, 2012-11-19 Have you ever considered that the root or cause of many problems and misunderstandings are fundamental differences between people? The solution to problems is in knowing these differences and living in harmony with Nature, because laws of Nature apply to everything and everyone. Power gained through the knowledge about Nature and programs implanted by Nature guarantees the survival of the fittest and enables anyone to organize things around them to their own benefit. Education increases one's cultural level and as a result one's survival rate in the environment. The results of this research include detailed recipes on how to develop, solve any problems, improve sex life, and more. Now any human being can achieve their goals and dreams, become stronger, healthier, wiser, sexier, more powerful, and get to such heights of which many do not even know. The journey is worth it. By learning how to live in harmony with Nature itself, together we can advance this civilization as a whole. Begin your journey right now. HPA Press publishes works that further the Human Population Academy's mission to educate people around the world about the laws of human Nature, the Catalog of Human Population, Catalog of Human Souls, and research of its source, Shan Hai Jing. Visit our website: [HumanPopulationAcademy.org](http://HumanPopulationAcademy.org). We have invented nothing, and we do not invent; we simply read the text we do not know how many millions of years old it is. And since this text, Shan Hai Jing, exists, has been passed to us by someone left to us to study, hence we should research it. And if it does not occur, type homo then remains a seed which will never grow into a tree. A. Davydov, O. Skorbatyuk, SHJLab.org
