Wydrzynski, Kimiyuki Satoh, 2006-01-27 The most mysterious part of photosynthesis yet the most important for all aerobic life on Earth including ourselves is how green plants algae and cyanobacteria make atmospheric oxygen from water This thermodynamically difficult process is only achieved in Nature by the unique pigment protein complex known as Photosystem II using sunlight to power the reaction The present volume contains 34 comprehensive chapters authored by 75 scientific experts from around the world It gives an up to date account on all what is currently known about the molecular biology
