Helen Hazen, Paul Sutton, 2024-10-07 This timely and innovative book delves into the complex interplay of human activities and natural limits in generating today's sustainability challenges. By contrasting the pressures of growing populations with ecological footprints associated with consumption the volume navigates the contested terrain where human societies generate environmental impacts. Adorned with illustrative figures examples and case studies throughout this book presents insightful analysis of ecological economic technological and social justice responses to the challenges faced by human civilization including land degradation climate change pollution and overexploitation of natural resources. Many of these issues are wicked problems characterized by incomplete information multiple stakeholders and contested approaches to addressing them. In simple terms sustainability issues are an interplay between population growth and rising consumption which are placing impossible demands on finite resources. Potential solutions to the crisis are split between green growth approaches that emphasize technology and institutional capacity to guide economic growth in more sustainable ways and degrowth approaches that call for a fundamental rethinking of the way we structure society and generate value. This book emerged from a student seminar where undergraduate and graduate students highlighted sustainability topics of concern.

helped consider their framing and then assisted with co writing several of the chapters The volume encourages readers to consider structural questions that underpin sustainability dilemmas and begins with four theoretical frameworks for understanding sustainability issues ideas from the natural sciences the population consumption debate economic frameworks and ethical approaches It then uses a systems approach to apply these theoretical ideas to complex global systems such as the atmosphere oceans and agriculture This volume will be of pivotal interest to students scholars and academics in the fields of environmental studies environment and society human geography and environmental geography as well as those with an interest in these areas more generally

Bioeconomy of Buildings Jan Grossarth, 2025-03-17 This book looks at how the bioeconomy and circular economy can help make construction more resource conserving The construction sector is at a crossroads searching for pathways to smarter material use whether bricks steel concrete or wood While technical solutions and innovative concepts exist their widespread adoption lags This inertia stems not just from technical or economic challenges but also from the deeper often overlooked layers of social and cultural dynamics the roles of actors institutions and collective perceptions of ecological crises The book weaves together quantitative insights and qualitative reflections exploring the rich history of resource conscious construction while embracing the promise of groundbreaking biotechnological innovations Can materials like lab grown bioplastics innovative cements recycled components or renewable resources such as CLT wood and straw bale construction drive progress toward material longevity What contributions can sustainable architecture rooted in aesthetics character originality and historical continuity make to these efforts What roles do certifications and lifecycle assessments play This book explores these questions offering a compelling narrative through the bioeconomy approach which envisions circular material flows grounded in economic pragmatism Since the 1950s when craftsmanship in construction was replaced by industrial processes knowledge about the value of materials was supplanted by cheap poorly applied chemistry As a result we built residential developments and suburbs that are not only aesthetically unappealing but also riddled with hazardous waste This book by Jan Grossarth has several strengths Firstly it avoids the trap of suggesting that the future of construction must rely solely on wood and biological materials eschewing the utopian vision of a back to nature approach to building Instead it offers a broad overview of the bewilderingly numerous concepts and ideologies surrounding sustainability bringing together many promising paths that are emerging in construction Prof Michael Braungart
