Stochastic Population Dynamics in Ecology and Conservation Russell Lande, Steinar Engen, Bernt-Erik Sæther, 2003 All populations fluctuate stochastically creating a risk of extinction that does not exist in deterministic models with fundamental consequences for both pure and applied ecology This book provides the most comprehensive introduction to stochastic population dynamics combining classical background material with a variety of modern approaches including new and previously unpublished results by the authors illustrated with examples from bird and mammal populations and insect communities Demographic and environmental stochasticity are introduced with statistical methods for estimating them from field data The long run growth rate of a population is explained and extended to include age structure with both demographic and environmental stochasticity Diffusion approximations facilitate the analysis of extinction dynamics and the duration of the final decline Methods are developed for estimating delayed density dependence from population time series using life history data Metapopulation viability and the spatial scale of population fluctuations and extinction risk are analyzed Stochastic dynamics and statistical uncertainty in population parameters are incorporated in Population Viability Analysis and strategies for sustainable harvesting Statistics of species diversity measures and species abundance distributions are described with implications for rapid assessments of biodiversity and methods are developed for partitioning species diversity into additive components Analysis of the stochastic dynamics of a tropical butterfly community in space and time indicates that most of the variance in the species abundance distribution is due to ecological heterogeneity among species so that real communities are far from neutral

Urban Deer Havens Clark E. Adams, Cassandra LaFleur Villarreal, 2020-05-06 Urban Deer Havens consists of a thorough examination of selected cervid deer species that are known to inhabit urban communities in the United States The deer species that are included in this presentation consisted of white tailed *Odocoileus virginianus* Key deer *O. v. clavium* moose *Alces alces* elk *Cervus elaphus* mule *Odocoileus hemionus* and black tailed deer *O. h. columbianus* This book is the first attempt to examine the similarities and differences in those factors that allow the selected cervids to exist and thrive in urban habitats This information has never been collected collated reviewed and published under one cover document Yet all five are known to inhabit urban communities within their geographic range The lack of information

concerning several important examples of urban cervids in conjunction with a proliferation of information on white tailed deer only is an incomplete and biased presentation This book is the first comprehensive source of information on urban deer management which includes a broad assemblage of urban cervids The overall objective of this book is to provide a more holistic examination of urban cervids For example it examines the similarities and differences of the environmental impacts management strategies and human dimensions considerations concerning urban cervids in general and using specific examples Urban Deer Havens features four chapters that include Urban deer census techniques and population dynamics Comprehensive tables that review urban community deer management plans National and state wide estimates the five selected cervids Laws and regulations concerning urban deer Lethal and nonlethal management options for managing deer Steps for managing urban deer populations Examples of urban deer management efforts

The biology and ecology of ticks shape the potential for the transmission of zoonotic pathogens. Agustín Estrada-Peña, Jose De La Fuente, 2015-02-24 Ticks are noticeable by the high diversity of pathogens they can transmit most of them with implications in human and animal health Ticks are arachnids meaning that they do not share the biological and ecological features of the mosquitoes and other parasitic Diptera The natural foci of tick borne pathogens may be as large as a continent or be restricted to small portions of a country without apparently too many similar features The life cycle of the ticks involved three developing instars The precise relationships of ticks and their hosts the specific seasonal pattern of activity of ticks and the still poorly known molecular relationships between ticks and the pathogens they can transmit make these vectors a specially fecund field of research Importantly extensive studies on the biological and ecological relationships of ticks and abiotic climate and vegetation conditions have revealed the fine tuning of the ticks and the pathogens they transmit together with the biological effects of host and the driving features by the climate The studies on tick transmitted pathogens have been on the rise in the last years There is a growing interest in understand the somewhat complex relationships between the landscape the climate the vectors and the pathogens because the concerns of spread probably driven by subtle changes in climate and man made alterations of the landscape Studies on Lyme borreliosis are addressing the interesting issue of the relationships between the climate the tick activity patterns and the selection of strains according to the reservoir availability Furthermore the expanding field of habitat suitability modeling has been applied with different degrees of success to evaluate and quantify the risk of disease transmission In such exponentially growing field revisionary books are clearly welcome additions to the bibliographical tools of researchers It is however necessary the compilation of works devoted to explore the tip of the iceberg in the field of research In this Research Topic we wish to summarize and review the studies on ecology molecular biology and tick host pathogens interactions provided to resolve the important issues of ticks and pathogens We want not only the results obtained by newly developed molecular tools but rigorous reviews of the most recent advances in these issues This Topic will cover aspects of both human and animal health with special interest on zoonoses Aspects of the biology of the ticks as affecting the transmission of pathogens are of special interest in this Topic Studies on ticks of the poorly known family Argasidae as related to their involvement on pathogen transmission are especially welcome We also wish to describe the perspective of the field in the future Finally the presentation of ongoing original works is greatly encouraged

numbers may be expressed as a density per unit area of the ground of the habitat Such estimates are given by nearest neighbour and related techniques Chapter 2 marking and recapture Chapter 3 by sampling a known fraction of the habitat Chapter 4 6 and by removal sampling and random walk techniques Chapter 7 Absolute population The number of animals per unit area e g hectare acre It is almost impossible to construct a budget or to study mortality factors without the conversion of population estimates to absolute figures for not only do insects often move from the plant to the soil at different developmental stages but the amount of plant material is itself always changing The importance of obtaining absolute estimates cannot be overemphasized Debating the Lewis Turning Point in China Yiping Huang,Fang Cai,2016-04-08 HUANG Yiping is Professor of Economics at the China Center for Economic Research National School of Development Peking University China He is also an adjunct professor at the Australian National University and a member of the China Finance 40 Forum His current research focuses on macroeconomic policy international finance and rural development CAI Fang is Director Professor and Fellow at the Institute of Population and Labor Economics Chinese Academy of Social Sciences China He serves as Vice Chairman of the China Population Association His current research focuses on China s labor migration population and development economic reform income distribution and poverty CBSE Class 12 - Geography Question Bank Mocktime Publication,101-01-01 CBSE 12 Question Bank Geography
