Evolution and Religious Creation Myths : How Scientists Respond Paul F. Lurquin School of Molecular Biosciences Washington State University,Linda Stone Department of Anthropology Washington State University,2007-06-08 Polls show that 45% of the American public believes that humans were created about 10 000 years ago and that evolution is non existent Another 25% believes that changes in the natural world are directed by a supernatural being with a particular goal in mind This thinking clashes frontally with scientific findings obtained in the past 150 years A large portion of the general public espouses the views of creationists and their descendants and ignores or is unaware of scientific advances Critical thinking about the natural world within a scientific framework is lacking in the USA and many parts of the world This manuscript provides a multidisciplinary explanation and defense for the science of evolution not just Darwinism as it is being challenged by arguments for intelligent design and other creation myths It draws in the life physical and social sciences and recent studies of human evolution that rely much on the idea of change over time which is evolution writ large It puts the evolution ID issue into international perspective by including opinions held in world religions other than Christianity It is clearly written and also can easily be used as a guide for those with some science background The authors make a convincing case that other books do not achieve this as much as they do in this work The book is written for a whole spectrum of educated people including teachers and teachers in training who are interested in the broad issues of the origins of the universe life and humans and who may not quite grasp the potential magnitude of the negative influence on all of science education of people embracing creationist and ID thinking This includes high school teachers and people on boards

of education and in municipal governments anyone involved in education It could be used also in college courses such as contemporary social issues and Science and Society sometimes team taught by sociologists and scientists The authors show that when they are teleological dogmatic or politically inspired religious and creation myths threaten scientific efforts The book does not require any extensive knowledge of science The principle of change over time pervades all of science from cosmology to the search for the origin for life to human physical and cultural evolution The book educates readers on scientific matters that overwhelmingly support the idea of evolution not only in the living world but also in physical and social science It explains too how evolution physical and biological is a random unguided process whose roots can be already found in quantum physics Journal of the Assembly, Legislature of the State of California California. Legislature. Assembly, 1942

The Genetic Imaginary Neil Gerlach, 2004-01-01 DNA testing and banking has become institutionalized in the Canadian criminal justice system As accepted and widespread though the practice is there has been little critique or debate of this practice in a broad public forum on the potential infringement of individual rights or civil liberties Neil Gerlach's *The Genetic Imaginary* takes up this challenge critically examining the social legal and criminal justice origins and effects of DNA testing and banking Drawing on risk analysis Gerlach explains why Canadians have accepted DNA technology with barely a ripple of public outcry Despite promises of better crime control and protections for existing privacy rights Gerlach's examination of police practices courtroom decisions and the changing role of scientific expertise in legal decision making reveals that DNA testing and banking have indeed led to a measurable erosion of individual rights Biogovernance and the biotechnology of surveillance almost inevitably lead to the empowerment of state agent control and away from due process and legal protection *The Genetic Imaginary* demonstrates that the overall effect of these changes to the criminal justice system has been to emphasize the importance of community security at the expense of individual rights The privatization and politicization of biogovernance will certainly have profound future implications for all Canadians
