Complete Science Communication Ryan C. Fortenberry, 2018-10-22 Science communication is a rapidly expanding area and a key component of many final year undergraduate and postgraduate courses. Authored by a highly regarded chemist and science communicator, this textbook pulls together all aspects of science communication. *Complete Science Communication* focusses on four major aspects of science communication: writing for non-technical audiences and science journalism; writing for technical audiences and peer-reviewed journal writing; public speaking of science and public relations. It first showcases how writing in a journalistic style is done and provides a guide for colloquially communicating science. Then, the art of writing scientific papers is conjoined to this idea to make technical manuscripts more digestible, readable, and hence citable. These ideas are next taken into the spoken word so that the scientist can engage in telling their science like that natural human art of campfire stories. Finally, all of these communication concepts are wrapped together in a discussion of public relations, providing the scientist with an appreciation for the marketing directors and news disseminators with whom they will work. Written in an accessible way, this textbook will provide science students with an appreciative understanding of communication, marketing, journalism, and public relations. They can incorporate these aspects into their own practices as scientists, allowing them to liaise with practitioners in the communication field.
