Marcus,2023-01-01 This book offers an overall review applying systems engineering and architecture approaches of the design optimization operation and results of leading fusion experiments These approaches provide a unified means of evaluating reactor design Methodologies are developed for more coherent construction or evaluation of fusion devices associated experiments and operating procedures The main focus is on tokamaks with almost all machines and their important results being integrated into a systems design space Case studies focus on DIII D TCV JET WEST the fusion reactor prototype ITER and the EU DEMO concept Stellarator Mirror and Laser inertial confinement experiments are similarly analysed including reactor implications of breakeven at NIF The book examines the engineering and physics design and optimization process for each machine analysing their performance and major results achieved thus establishing a basis for the improvement of future machines The reader will gain a broad historical and up to date perspective of the status of nuclear fusion research from both an engineering and physics point of view Explanations are given of the computational tools needed to design and operate successful experiments and reactor relevant machines This book is aimed at both graduate students and practitioners of nuclear fusion science and engineering as well as those specializing in other fields demanding large and integrated experimental equipment Systems engineers will obtain valuable insights into fusion applications References are given to associated complex mathematical derivations which are beyond the scope of this book The general reader interested in nuclear fusion will find here an accessible summary of the current state of nuclear fusion **Volcanic Processes in the Sedimentary Record** A. Di Capua,R. De Rosa,G. Kereszturi,E. Le Pera,M. Rosi,S.F.L. Watt,2023-04-18 Volcanoes and sedimentary systems are linked by a strong relationship The ascent and eruption of magma liberates large volumes of material through a variety of mechanisms to the surrounding environment with subsequent sediment input and transport influencing the evolution of that environment This connection between volcanism and adjacent sedimentary systems has long attracted the attention of geologists giving rise to an increasing body of academic research over the past three decades Volcanic Processes in the Sedimentary Record When Volcanoes Meet the Environment collects innovative works exploring how volcanoes and sedimentary systems interact moving from the processes directly associated with eruptive behaviour to the most distal sedimentary offshoots where volcanogenic particles are accumulated during or after volcanic activity In doing this different volcanic and environmental settings are explored travelling through space and time showing how volcanoclastic detritus is produced and dispersed by volcanic volcano sedimentary and sedimentary mechanisms via processes affecting development of volcanic edifices themselves through to the most distal depocentres
