International Handbook of Research in History, Philosophy and Science Teaching Michael R.

Matthews, 2014-07-03 This inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical curricular and pedagogical issues in the teaching of science and mathematics. It is contributed to by 130 researchers from 30 countries; it provides a logically structured, fully referenced guide to the ways in which science and mathematics education is informed by the history and philosophy of these disciplines as well as by the philosophy of education more generally. The first handbook to cover the field, it lays down a much needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject. The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education, attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects. There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science; this handbook is uniquely positioned as a locus for the discussion. The handbook features sections on pedagogical, theoretical, national and biographical research, setting the literature of each tradition in its historical context. It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching, and that lessons can be learnt from these engagements for the resolution of current theoretical, curricular and pedagogical questions that face teachers and administrators. Science educators will be grateful for this unique encyclopaedic handbook.

Gerald Holton, Physics Department, Harvard University. This handbook gathers the fruits of over thirty years' research by a growing international and cosmopolitan community.

Fabio Bevilacqua, Physics Department, University of Pavia. Logical Empiricism and the Physical Sciences

Sebastian Lutz, Adam Tamas Tuboly, 2021-04-26 This volume has two primary aims: to trace the traditions and changes in methods, concepts and ideas that brought forth the logical empiricists' philosophy of physics, and to present and analyze the logical empiricists' various and occasionally contrary ideas about the physical sciences and their philosophical relevance. These original chapters discuss these developments in their original contexts and social and institutional environments, thus showing the various fruitful conceptions and philosophies behind the history of 20th century philosophy of science. Logical Empiricism and the Natural Sciences is divided into three thematic sections. Part I surveys the influences on logical empiricism's philosophy of science and physics. It features chapters on Maxwell's role in the worldview of logical empiricism; on Reichenbach's account of objectivity; on the impact of Poincaré on Neurath's early views on scientific method; on Frank's exchanges with Einstein about philosophy of physics; and on the forgotten role of Kurt Grelling. Part II focuses on specific physical theories, including Carnap's and Reichenbach's positions on Einstein's theory of general relativity; Reichenbach's critique of unified field theory; and the logical empiricists' reactions to quantum mechanics. The third and final group of chapters widens the scope to philosophy of science and physics in general. It includes contributions on von Mises' frequentism; on Frank's account of concept formation and confirmation; and the interrelations between Nagel's, Feigl's and Hempel's versions of logical empiricism. This book offers a comprehensive account of the logical empiricists' philosophy of

physics It is a valuable resource for researchers interested in the history and philosophy of science philosophy of physics and the history of analytic philosophy
