 investors placed their bets on single technology treatment facilities costing 100 300 million each Critics inside medicine
 called the widely publicized proton center boom crazy medicine and unsustainable public policy There was no valid evidence
 they claimed that proton beams were more effective than less costly alternatives But developers expected insurance to cover
 their centers staggeringly high costs and debts Was speculation like this new to health care Cancer Radiation Therapy and
 the Market shows how the radiation therapy specialty in the United States later called radiation oncology coevolved with its
 device industry throughout the twentieth century Academic engineers and physicians acquired financing to develop
 increasingly powerful radiation devices initiated companies to manufacture the devices competitively and designed hospital
 and freestanding procedure units to utilize them In the process they incorporated market strategies into medical
 organization and practice Although palliative benefits and striking tumor reductions fueled hopes of curing cancer scientific
 research all too often found serious patient harm and disappointing beneficial impact on cancer survival This thoroughly
 documented and provocative inquiry concludes that public health policy needs to re evaluate market driven high tech
