Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Transnational Higher Education in Computing Courses Jenny Carter, Clive Rosen, 2019-09-24 There has been exponential growth in transnational education TNE in the last few years as UK universities have looked to expand their markets Recipient countries have sought short cuts to developing their higher education provision which has proved a lucrative income stream for some universities But overseas collaborations are not without risk Recipient countries can be concerned with external influence over curricula quality being diluted and higher education being infected by neo imperialism These concerns are not without foundation There are risks for providers too Reputations can be damaged if academic standards are compromised Conflicts of interest can occur between quality of provision and the pot of gold on offer Staff can view overseas collaborations as distracting from their

research and commitment to home students Computing is a particularly popular subject for TNE but critical thinking analysis independent learning and creativity can be compromised Preventing plagiarism is difficult Constant changes in technology result in constant curricula revision which causes severe problems for overseas collaborations This book focuses on TNE in the computing domain However cross cultural issues challenge TNE management and administration whatever the subject area If the ever present tensions are not continuously monitored they can quickly threaten the sustainability of the collaboration This book identifies many of the threats and some of the solutions The readership for this book is truly global Any international development officer in higher education considering an overseas collaboration will benefit from this book Any academic becoming engaged in or already involved with a TNE partnership either as provider or recipient will gain information and insight into the practice and issues Researchers in TNE will discover more lines of enquiry Students considering a course with an overseas provider or in coming to the UK to study will be better prepared thereby enabling a more fulfilling and rewarding experience Anyone who has an interest in TNE whether at the senior executive level operational level delivering programmes or as a recipient of TNE should read this book The wealth of experience gathered here will provoke questions prompt debate and offer solutions It has been written by people who know the issues bear the scars and are happy to share their knowledge It will greatly benefit future transnational collaborations

Cancer, Radiation Therapy, and the Market Barbara Bridgman Perkins, 2017-08-16 Appraising cancer as a major medical market in the 2010s Wall Street investors placed their bets on single technology treatment facilities costing 100 300 million each Critics inside medicine called the widely publicized proton center boom crazy medicine and unsustainable public policy There was no valid evidence they claimed that proton beams were more effective than less costly alternatives But developers expected insurance to cover their centers staggeringly high costs and debts Was speculation like this new to health care *Cancer Radiation Therapy and the Market* shows how the radiation therapy specialty in the United States later called radiation oncology coevolved with its device industry throughout the twentieth century Academic engineers and physicians acquired financing to develop increasingly powerful radiation devices initiated companies to manufacture the devices competitively and designed hospital and freestanding procedure units to utilize them In the process they incorporated market strategies into medical organization and practice Although palliative benefits and striking tumor reductions fueled hopes of curing cancer scientific research all too often found serious patient harm and disappointing beneficial impact on cancer survival This thoroughly documented and provocative inquiry concludes that public health policy needs to re evaluate market driven high tech medicine and build evidence based health care systems

What works in early reading materials Ana Robledo, Amber Gove, 2019-02-25 Access to books is key to learning to read and sustaining a love of reading Yet many low and middle income countries struggle to provide their

students with reading materials of sufficient quality and quantity Since 2008 RTI International has provided technical assistance in early reading assessment and instruction to ministries of education in dozens of low and middle income countries The central objective of many of these programs has been to improve learning outcomes in particular reading for students in the early grades of primary school Under these programs RTI has partnered with ministry staff to produce and distribute evidence based instructional materials at a regional or national scale in quantities that increase the likelihood that children will have ample opportunities to practice reading skills and at a cost that can be sustained in the long term by the education system In this paper we seek to capture the practices RTI has developed and refined over the last decade particularly in response to the challenges inherent in contexts with high linguistic diversity and low operational capacity for producing and distributing instructional materials These practices constitute our approach to developing and producing instructional materials for early grade literacy We also touch upon effective planning for printing and distribution procurement but we do not consider the printing and distribution processes in depth in this paper We expect this volume will be useful for donors policymakers and practitioners interested in improving access to cost effective high quality teaching and learning materials for the early grades

Information Physics Miroslav Svitek,2021-06-05 Information Physics Physics Information and Quantum Analogies for Complex Modeling presents a new theory of complex

systems that uses analogy across various aspects of physics including electronics magnetic circuits and quantum mechanics The book explains the quantum approach to system theory that can be understood as an extension of classical system models The main idea is that in many complex systems there are incomplete pieces of overlapping information that must be strung together to find the most consistent model This incomplete information can be understood as a set of non exclusive observer results Because they are non exclusive each observer registers different pictures of reality Provides readers with an understanding of the analogies between very sophisticated theories of electrical circuits and currently underdeveloped information circuits including capturing positive and negative links as well as serial and parallel ordering of information blocks Integrates coverage of quantum models of complex systems using wave probabilistic functions which extend the classical probability description by phase parameters that allow researchers to model such properties as entanglement superposition and others Provides readers with illustrative examples of how to use the presented theories of complex systems in specific cases such as hierarchical systems cooperation of a team of experts the lifecycle of the company and the link between short and long term memory
