Elsayed,2016-11-08 Over the last two decades the field of Intelligent Systems delivered to human kind significant achievements while also facing major transformations 20 years ago automation and knowledge based AI were still the dominant paradigms fueling the efforts of both researchers and practitioners Later 10 years ago statistical machine intelligence was on the rise heavily supported by the digital computing and led to the unprecedented advances in and dependence on digital technology However the resultant intelligent systems remained designer based endeavors and thus were limited in their true learning and development abilities Today the challenge is to have in place intelligent systems that can develop themselves on behalf of their creators and gain abilities with no or limited supervision in the tasks they are meant to perform Cognitive development systems and the supporting cognitive computing are on the rise today promising yet other significant achievements for the future of human kind This book captures this unprecedented evolution of the field of intelligent systems presenting a compilation of studies that covers all research directions in the field over the last two decades offering to the reader a broad view over the field while providing a solid foundation from which outstanding new ideas may emerge **An Ethical Evaluation of Lethal Functions in Autoregulative Weapons Systems** Nicole

Kunkel,2024-12-30 This book connects two of the most pressing ethical topics of our time questions of peace and technology materialized in so called autonomous weapons systems which can operate without human control and intervention in real time The author however criticizes the term autonomy as too anthropomorphic and therefore misleading She consequently proposes using the term autoregulation in its place Taking a contingent pacifist stance this book addresses the question of whether such technological means help or hinder peace processes The argument is tripartite First it is demonstrated that the risk of harm to nonparticipants is very likely to increase Second and with respect to responsibility it is indicated that a human machine system can only be operated responsibly if a human is in control Finally this idea is transferred into theological thought through reference to Bonhoeffer s idea of incurring guilt in acting responsibly In that context autoregulative technology might pose the possibility of shying away from responsibility and therefore becoming guilty This book is among the first ethical considerations of lethal autoregulative weaponry from a contingent pacifist stance and brings together peace ethical thinking and theories from various backgrounds *Electrical & Electronics Abstracts* ,1997
