some critical terms Handbook of Food Factory Design Christopher G. J. Baker, 2013-08-27 Food manufacturing has evolved over the centuries from kitchen industries to modern sophisticated production operations A typical food factory includes the food processing and packaging lines the buildings and exterior landscaping and the utility supply and waste treatment facilities As a single individual is unlikely to possess all the necessary skills required to facilitate the design the task will undoubtedly be undertaken by an interdisciplinary team employing a holistic approach based on a knowledge of the natural and biological sciences most engineering disciplines and relevant legislation In addition every successful project requires a competent project manager to ensure that all tasks are completed on time and within budget This Handbook attempts to compress comprehensive up to date coverage of these areas into a single volume It is hoped that it will prove to be of value across the food manufacturing community The multi disciplinary nature of the subject matter should facilitate more informed communication between individual specialists on the team It should also provide useful background information on food factory design for a wider range of professionals with a more peripheral interest in the subject for example process plant suppliers contractors HSE specialists retailers consultants and financial institutions Finally it is hoped that it will also prove to be a valuable reference for students and instructors in the areas of food technology chemical engineering and mechanical engineering in particular Plant Design and Economics for Chemical Engineers Max S.
