PLANTS

FLOWERING VS NON-FLOWERING PLANTS

Plants are classified into different groups based on their characteristics. One such classification is based on whether a plant produces flowers or not. Flowering plants are also called angiosperms, while non-flowering plants are called gymnosperms.

Flowering Plants

Flowering plants are a diverse group of plants that produce flowers. The flowers are the reproductive parts of a plant and they produce fruits and seeds. The seeds are spread by various methods like wind, water, animals, etc., and they grow into new plants.

Flowering plants have a unique structure called the flower, which has different parts like petals, sepals, stamens, and pistils. The petals are colorful and attract pollinators like bees, butterflies, and birds. The stamens and pistils are the reproductive parts that produce the pollen and ovules respectively.

Examples of flowering plants include roses, tulips, daisies, sunflowers, etc.

Non-Flowering Plants

Non-flowering plants include a diverse group of plants that do not produce flowers. These plants reproduce through spores or seeds. They have different structures like leaves, stems, and roots, but not flowers.

Gymnosperms are a type of non-flowering plants that reproduce through seeds. They have needle-like leaves and are not enclosed in an ovary like flowering plants. Examples of gymnosperms include pines, firs, and cypresses.

Spores are another type of non-flowering plants that reproduce through spores. They have leaves that are called fronds and they do not produce flowers or seeds. Spores are found in different habitats like forests, swamps, and oceans.

Comparison

The major difference between flowering and non-flowering plants is their reproductive structures. Flowering plants produce flowers that have unique structures like petals, stamens, and pistils. Non-flowering plants reproduce through spores or seeds and do not produce flowers or fruits.

Another difference is the way they reproduce. Flowering plants reproduce through pollination, while non-flowering plants reproduce through spores or seeds.
