

Applications

1. a. 25 shirts would cost \$70. You could use a table by trying to find the cost C for every value of n . Thus, the table would reflect values for $n = 1, 2, 3, \dots, 25$. You could use the graph by finding some coordinate pairs and then extending the line formed. You would go over to 25 on the x -axis (the axis representing the variable n), and then go up on the y -axis until you reach the line, and read the value of C .

- b. The class could buy 30 shirts for \$80. You could use a table by trying to find the cost C for every value of n . Thus, the table would reflect values for n until you reached a value of \$80 for C . You could use the graph by finding some coordinate pairs and extending the line formed. You would go up to 80 on the y -axis (the axis representing the variable C), and then go over on the x -axis until you reach the line, and read the value of n .

- c. Taleah is looking for the Cost C of 15 T-shirts.
d. Keisha is looking to see if 30 T-shirts resulted in a cost of \$80.

2. a. Plan 1: the number of km walked
Plan: the amount of money raised in dollars
Plan 3: the number of km walked
b. Plan 1: Solve for x . Divide 14 by 2, which would give you 7 kilometers walked;
Plan 2: Solve the right side of the equation for y . Take 3.5 times 10 (35) and then add 10, thus giving you \$45 (the amount raised);
Plan 3: Solve for x . Take 100 minus 55 (45), and then divide that by 1.5, which would give you 30 kilometers walked.

3. a. $y = 45$

- b. $x = 22$

- c. $x = 3$

4. a. $y = -10$

- b. $x = 13$

- c. You could use a table by trying to find the y for every value of x . Thus, the table would reflect values of x from 1 through at least 13. You could use the graph by finding the coordinate pairs. You would go over to 1 on the x -axis, and then go up or down on the y -axis until you reach the line, and read the value of y . You can do the same thing to find the x -value, either by looking at all values in a chart that give you either a particular x - or y -value or by finding coordinate pairs on the graph. For example, you would go up to 50 on the y -axis and move along the x -axis until you reach the line. Then read the x -value of the coordinate pair, which is 13.
