

Life on Earth

Evolution of Eukaryotes to Multicellular Life

Evolution of Eukaryotic Cells

- Several different specialized prokaryotes began to live together in a **symbiotic** relationship. These cell types took on specialized functions, and became **organelles** in a larger cell.
- A **eukaryote** is a cell that contains a separate nucleus to hold its DNA and RNA.

Study Tip

To remember the difference between eukaryotes and prokaryotes, remember that **you** are a **eukaryote**. Humans are large, complex organisms whose eukaryotic cells have nuclei.

Multicellular Life

- Prokaryotes and Eukaryotes can both be multicellular.
- Multicellular life may have evolved several times throughout Earth's history.

Why It Took So Long

- Evolutionary processes are generally slow
- No evolutionary advantage to being larger and more complex
- Harsh conditions during Earth's earlier years
 - Limited atmospheric oxygen
 - Planet was too cold for complex life
 - Extinction due to global glaciations

Eukaryotic cells formed as simpler, specialized prokaryotes began working together in cells.

Concept Check

- What are the differences between eukaryotes and prokaryotes?
- How did one evolve into the other?
- Why did complex life take so long to evolve?

Dynamics Richard E. Michod, 2021-01-12 The concept of fitness has long been a topic of intense debate among evolutionary biologists and their critics with its definition and explanatory power coming under attack In this book Richard Michod offers a fresh dynamical interpretation of evolution and fitness concepts He argues that evolution has no enduring products what matters is the process of genetic change Whereas many biologists have focused on competition and aggression as determining factors in survival Michod by concentrating on the emergence of individuality at new and more complex levels finds that cooperation plays even a greater role Michod first considers the principles behind the hierarchically nested levels of organization that constitute life genes chromosomes genomes cells multicellular organisms and societies By examining the evolutionary transitions from the molecular level up to the whole organism the author explains how cooperation and conflict in a multilevel setting leads to new levels of fitness He builds a model of fitness drawing on recent developments in ecology and multilevel selection theory and on new explanations of the origin of life Michod concludes with a discussion of the philosophical implications of his theory of fitness a theory that addresses the most fundamental and unique concept in all of biology
