Environmental Science, *Land Resources Monitoring, Modeling, and Mapping with Remote Sensing* Ph.D., Prasad S. Thenkabail, 2015-10-02. A volume in the three volume Remote Sensing Handbook series. Land Resources Monitoring Modeling and Mapping with Remote Sensing documents the scientific and methodological advances that have taken place during the last 50 years. The other two volumes in the series are Remotely Sensed Data Characterization Classification and Accuracies and Remote Sensing of Water Resources Disasters and Urban Studies. In true handbook style the chapters in the volume have been carefully selected, organized and designed to be self contained so that you can focus on a chapter and read it through without having to be overly dependent on other chapters. This volume provides comprehensive theoretical and practical coverage of remote sensing of land resources that include vegetation and biomass, agricultural croplands, rangelands, phenology and food security, forests, biodiversity, ecology, land use, land cover, carbon and soils. Highlights include Global terrestrial carbon and carbon budgets, Precision farming, Agricultural systems studies and soil studies, Global croplands, agricultural croplands and rangelands, Food security analysis, Biodiversity, Land use and land cover mapping, Measuring photosynthesis from space, Vegetation characterization and above ground biomass measurements and modeling, Hyperspectral remote sensing, Ecological studies, Tropical forest characterization, Habitat mapping and monitoring. In a very practical way the book demonstrates the experience, utility, methods and models used in studying a wide array of land applications. With more than 100 leading global contributors, this book is the most comprehensive documentation of the scientific and methodological advances that have taken place in understanding remote sensing data methods and applications over the last 50 years. In a very practical way the book demonstrates the experience, utility, methods and models used in studying a wide array of Land applications.

Concepts in Biology' 2007 Ed. 2007 Edition,

Greenhouse Gas Emissions - Fluxes and Processes A. Tremblay, Louis Varfalvy, Charlotte Roehm, Michelle Garneau, 2011-04-30. In a time when an unquestionable link between anthropogenic emissions of greenhouse gases and climatic changes has finally been acknowledged and widely documented through IPCC reports, the need for precise estimates of greenhouse gas (GHG) production rates and emissions from natural as well as managed ecosystems has risen to a critical level. Future agreements between nations concerning the reduction of their GHG emissions will pend upon precise estimates of the present level of these emissions in both natural and managed terrestrial and aquatic environments. From this viewpoint the present volume should prove to be a benchmark contribution because it provides very carefully assessed values for GHG

emissions or exchanges between critical climatic zones in aquatic environments and the atmosphere. It also provides unique information on the biases of different measurement methods that may account for some of the contradictory results that have been published recently in the literature on this subject. Not only has a large array of current measurement methods been tested concurrently here but a few new approaches have also been developed notably laser measurements of atmospheric CO₂ concentration gradients. Another highly useful feature of this book is the addition of monitoring and process studies as well as modeling.

Challenges and Solutions in Forecasting and Decision-Making in Marine Economy and Management

Xuemei Li, Kevin Li, Junjie Wang, Song Ding, 2025-08-11 The marine economy and management pertain to the sustainable utilization of marine resources through internal and external coordination across departments with a focus on maximizing social and economic benefits. However, the persistence of activities such as overfishing, offshore oil spills, and excessive coastal development has led to escalating issues like offshore eutrophication, ocean acidification, warming, and marine plastic pollution, posing significant threats to marine sustainability. In alignment with the United Nations Sustainable Development Goal 14, substantial progress has been achieved by ocean management researchers in analyzing fishery resource management, optimization of marine industrial structures, development of marine energy, and adaptation of marine climate change. These studies hold crucial theoretical significance and practical value for understanding the state of the marine economy, guiding management practices, ensuring marine ecological security, and fostering sustainable ocean development.

Acid Precipitation, 1993-07 *From Fires to Oceans: Dynamics of Fire-Derived Organic Matter in Terrestrial and Aquatic Ecosystems* Samuel Abiven, Cristina Santín, 2019-05-09 Fire-derived organic matter, also known as pyrogenic carbon (PyC), is ubiquitous on Earth. It can be found in soils, sediments, water, and air. In this wide range of environments, fire-derived organic matter represents a key component of the organic matter pool and, in many cases, the largest identifiable group of organic compounds. PyC is also one of the most persistent organic matter fractions in the ecosystems, and its study is therefore particularly relevant for the global carbon cycle. From its production during vegetation fires to its transfer into soils, sediments, and waters, PyC goes through different transformations, both abiotic and biotic. Contrary to early assumptions, PyC is not inert and interacts strongly with the environment; evidence of microbial decomposition, oxidation patterns, and interactions with minerals have been described in different matrices. PyC travels across these different environments and it is modified chemically and physically but remains persistent. This Research Topic explores important questions in our understanding of fire-derived organic matter, from the characterization and quantification of PyC components to the transformation and mobilization processes taking place on terrestrial and aquatic ecosystems. The studies compiled here provide novel and often unexpected results. They all answer some of the questions posed and more importantly provide scope for many more.
