Sedimentation in the Grand Canyon

Use your math skills to study the Colorado River's rate of sedimentation in the Grand Canyon.

Imagine that you are a geologist and that you read the following excerpt in a geological journal:

EARTH ALERT: A gradual change in the global climate is causing the Colorado River to slowly deposit sediment in the Grand Canyon. Scientists estimate that the present rate of deposition is raising the canyon floor by 0.05 mm per year.

Your geological interests lead you to ask some questions. Suppose that you've organized your questions and concerns into the following itemized list. Using your mathematical knowledge, answer the following six items about the fate of the Grand Canyon.

Question List

ITEM 1: If the canyon is 1500 m deep, how long will it be until the river completely fills the canyon with sediment? Show your work.

ITEM 2: Make a graph on the grid below to show the amount of sediment deposited in the Grand Canyon over an average human lifetime (about 75 years in the United States). Make sure to label the x-axis and y-axis and to give your graph a title.
