Secure Web Applications Via Automatic Partitioning:

Collaborative Computing: Networking, Applications and Worksharing Elisa Bertino, James Joshi, 2009-07-25

CollaborateCom is an annual international forum for dissemination of original ideas and research results in collaborative computing networks systems and applications. A major goal and feature of CollaborateCom is to bring researchers from networking systems, CSCW, collaborative learning and collaborative education areas together. CollaborateCom 2008, held in Orlando, Florida, was the fourth conference of the series and it reflects the accelerated growth of collaborative computing both as research and application areas. Concretely, recent advances in many computing fields have contributed to the growing interconnection of our world, including multi-core architectures, 3G/4G wireless networks, Web 2.0 technologies, computing clouds, and software as a service, just to mention a few. The potential for collaboration among various components has exceeded the current capabilities of traditional approaches to system integration and interoperability. As the world heads towards unlimited connectivity and global computing, collaboration becomes one of the fundamental challenges for areas as diverse as eCommerce, eGovernment, eScience, and the storage management and access of information through all the space and time dimensions. We view collaborative computing as the glue that brings the components together and also the lubricant that makes them work together. The conference and its community of researchers demonstrate the concrete progress we are making towards this vision. The conference would not have been successful without help from so many people.

Encyclopedia of Cryptography, Security and Privacy Sushil Jajodia, Pierangela Samarati, Moti Yung, 2025-01-10. A rich stream of papers and many good books have been written on cryptography, security, and privacy, but most of them assume a scholarly reader who has the time to start at the beginning and work his way through the entire text. The goal of *Encyclopedia of Cryptography, Security and Privacy*, Third Edition, is to make important notions of cryptography, security, and privacy accessible to readers who have an interest in a particular concept related to these areas but who lack the time to study one of the many books in these areas. The third edition is intended as a replacement of *Encyclopedia of Cryptography and Security*, Second Edition, that was edited by Henk van Tilborg and Sushil Jajodia and published by Springer in 2011. The goal of the third edition is to enhance on the earlier edition in several important and interesting ways. First, entries in the second edition have been updated when needed to keep pace with the advancement of state of the art. Second, as noticeable already from the title of the encyclopedia, coverage has been expanded with special emphasis to the area of privacy. Third, considering the fast pace at which information and communication technology is evolving and has evolved drastically since the last edition, entries have been expanded to provide a comprehensive view and include coverage of several newer topics.
