Cryptography and Security in Computing Jaydip Sen, 2012-03-07 The purpose of this book is to present some of the critical security challenges in today's computing world and to discuss mechanisms for defending against those attacks by using classical and modern approaches of cryptography and other defence mechanisms. It contains eleven chapters which are divided into two parts. The chapters in Part 1 of the book mostly deal with theoretical and fundamental aspects of cryptography. The chapters in Part 2 on the other hand discuss various applications of cryptographic protocols and techniques in designing computing and network security solutions. The book will be useful for researchers, engineers, graduate and doctoral students working in cryptography and security related areas. It will also be useful for faculty members of graduate schools and universities.

Computer Network Security and Cyber Ethics, 4th ed. Joseph Migga Kizza, 2014-03-27 In its 4th edition this book remains focused on increasing public awareness of the nature and motives of cyber vandalism and cybercriminals, the weaknesses inherent in cyberspace infrastructure and the means available to protect ourselves and our society. This new edition aims to integrate security education and awareness with discussions of morality and ethics. The reader will gain an understanding of how the security of information in general and of computer networks in particular on which our national critical infrastructure and indeed our lives depend is based squarely on the individuals who build the hardware and design and develop the software that run the networks that store our vital information. Addressing security issues with ever growing social networks are two new chapters: Security of Mobile Systems and Security in the Cloud Infrastructure. Instructors considering this book for use in a course may request an examination copy here.

Information Security and Cryptology - ICISC 2009 Donghoon Lee, Seokhie Hong, 2010-06-20 ICISC 2009, the 12th International Conference on Information Security and Cryptology, was held in Seoul, Korea, during December 2-4, 2009. It was organized by the Korea Institute of Information Security and Cryptology (KIISC) and the Ministry of Public Administration and Security (MOPAS). The aim of this conference was to provide a forum for the presentation of new results in research, development and applications in the field of information security and cryptology. It also served as a place for research information exchange. The conference received 88 submissions from 22 countries covering all areas of information security and cryptology. The review and selection processes were carried out in two stages by the Program Committee (PC) comprising 57 prominent researchers via online meetings. First, at least three PC members blind

reviewed each paper and papers co authored by the PC members were reviewed by at least five PC members. Second individual review reports were revealed to PC members and detailed interactive discussion on each paper followed. Through this process the PC finally selected 25 papers from 15 countries. The acceptance rate was 28.4%. The authors of selected papers had a few weeks to prepare for their final versions based on the comments received from more than 80 external reviewers. Secure Key Establishment Kim-Kwang Raymond Choo, 2008-10-25. Research on Secure Key Establishment has become very active within the last few years. Secure Key Establishment discusses the problems encountered in this field. This book also introduces several improved protocols with new proofs of security. Secure Key Establishment identifies several variants of the key sharing requirement. Several variants of the widely accepted Bellare and Rogaway 1993 model are covered. A comparative study of the relative strengths of security notions between these variants of the Bellare Rogaway model and the Canetti Krawczyk model is included. An integrative framework is proposed that allows protocols to be analyzed in a modified version of the Bellare Rogaway model using the automated model checker tool. Secure Key Establishment is designed for advanced level students in computer science and mathematics as a secondary text or reference book. This book is also suitable for practitioners and researchers working for defense agencies or security companies.
