

Cyber-security Self-assessment

This self-assessment assists an organization in identifying areas that need to be strengthened to help ensure security of the organization's data systems and networks. Be sure to assign action items to specific individuals or groups and follow-up to make sure that corrective actions are implemented.

Completed by: _____ Title: _____ Date: _____ Signature: _____

ITEM	YES	NO	DEPT./ORGANIZATION	COMMENTS	ACTION ITEM	ASSIGNED TO
1. Has your organization, at any time during the past 12 months, experienced a cyber-incident (hacking, intrusion, malware infection, fraud loss, breach of personal information, extortion, etc.) or experienced a threat or other formal dispute (with either a private party or government agency) arising from a cyber-incident?						
2. Does every device in your organization have anti-virus and anti-malware software installed and do you keep the software up to date?						
3. Do you install all relevant security updates on every system in your environment (e.g., desktops, laptops, mobile devices, servers, firewalls, routers, switches, etc.)?						
4. Do any third parties have access to your network?						
5. Do third parties use multifactor authentication when connecting to your network?						
6. Do you review the security of third parties to ensure that they have industry standard security controls in place to protect your data?						
7. Do you have firewalls in place between your network(s) and the Internet?						
8. Is your network flat (any device can talk to any other device) or segmented (devices are split by category or sensitivity to limit with which devices they can communicate)?

Security Self-Assessment Guide for Information Technology Systems Marianne Swanson, 2001 Adequate security of information and the systems that process it is a fundamental management responsibility Agency officials must understand the current status of their information security program and controls in order to make informed judgments and investments that appropriately mitigate risks to an acceptable level Self assessments provide a method for agency officials to determine the current status of their information security programs and where necessary establish a target for improvement This self assessment guide utilizes an extensive questionnaire containing specific control objectives and techniques against which an unclassified system or group of interconnected systems can be tested and measured The guide does not establish new security requirements The control objectives and techniques are abstracted directly from long standing requirements found in statute policy and guidance on security This document builds on the Federal IT Security Assessment Framework Framework developed by NIST for the Federal Chief Information Officer CIO Council The Framework established the groundwork for standardizing on five levels of security status and criteria agencies could use to determine if the five levels were adequately implemented This document provides guidance on applying the Framework by identifying 17 control areas such as those pertaining to identification and authentication and contingency planning In addition the guide provides control objectives and techniques that can be measured for each area **Cloud**
