Secrecy and Science Professor Brian Balmer, 2013-01-28 It is no secret that twentieth century Britain was governed through a culture of secrecy and secrecy was particularly endemic in military research and defence policy surrounding biological and chemical warfare More generally it is hard to exaggerate the role of secrecy in all past biological and chemical warfare programmes and several recent historical surveys of biological and chemical warfare research have emphasised that all state sponsored programmes together with sub state organised activities were cloaked in utmost secrecy Of these research programmes Britain carried out one of the most significant in scale and scope in the twentieth century Yet partly because of the secrecy surrounding the programme there is still little academic literature on its historical development Equally and despite secrecy being a pervasive feature of past and contemporary societies social scientists and historians have paid relatively little scholarly attention to the nature mechanics and effects of secrecy particularly with regard to secrecy in relation to the production and governance of science and technology Drawing on classical sociological writing on secrecy by Simmel Merton and Shils this groundbreaking book by Brian Balmer draws on recently declassified documents to investigate significant episodes in the history of biological and chemical warfare At the same time it draws on more contemporary perspectives in science and technology studies that understand knowledge and social order as co produced within heterogeneous networks of things and people in order to develop a theoretical set of arguments about how the relationship between secrecy and science might be understood

facilitate the production of weapons of mass destruction by state sub state or terrorist organizations Consideration is given to what we have and haven't learned from the past Employing both academic analysis and reflections by practitioners the book examines the security inspired governance regimes for the life sciences that are under development Ultimately the authors examine what is required to form a comprehensive and workable web of prevention and highlight the importance of encouraging discussions between scientists policy makers and others regarding the governance of vital but potentially dangerous research Dr Graham S Pearson Visiting Professor of International Security University of Bradford UK and previously Director General Chemical and Biological Defence Establishment UK
