## BIOLOGY EOC REVIEW PACKET

### Scientific Method

1. Define the following:
  - a. Independent Variable: **the variable that I change in the experiment**
  - b. Dependent Variable: **the variable that I am measuring (it depends on the independent variable)**
  - c. Control Variable: **variable that stay the same**
  - d. Controlled experiment: **an experiment in which only one variable is changed at a time**
  - e. Hypothesis: **an educated guess (If..., then...)**
2. You have measured the rate at which a fish breaths at various temperatures by counting the rate at which its gills open. The data table is shown below. Create a line graph depicting the results.

| Breathing Rate (breaths/minute) | Temperature (°C) |
|---------------------------------|------------------|
| 19                              | 5                |
| 25                              | 10               |
| 30                              | 20               |
| 34                              | 30               |
| 38                              | 35               |

- a. What is the independent variable? Explain why.  
**Temperature, it is the variable that is being changed**
- b. The dependent variable? Explain why.  
**Breathing rate, it is the variable that is being measured and it depends on the temperature**
- c. What happens to breathing rate with increase in temperature?  
**Breathing rate increases**
- d. Identify at least 3 control variables in this experiment.  
**Same tank, same fish, same pH of water, same time of day**
- e. What do you think would happen if you raised the temperature even more? Why would it be a bad idea to do this?  
**The breathing rate would increase even more, but if the temperature gets too hot the fish could die.**
