This book presents the latest research and current thinking on the role of ecological integrity in support of life on Earth and the importance of governance for the common good or the benefit of all. The book considers whether present forms of governance support the common good or whether they are endangering its very foundations. It explores the connection between consumerism and capitalism, the destruction of natural resources and with it the elimination of many of the ecosystem services that support life in general and human life in particular. Chapters focus on the defence of human rights and in particular the rights to key resources such as food, water and general health, wellbeing as well as energy and security. Topics covered include climate change, biodiversity, migration and conflict resolution with approaches from various perspectives such as politics, ethics, sociology and law. Overall, the book provides a stimulating insight into the multifaceted debates surrounding ecological integrity, global governance and sustainability. *The Money Crisis* Peter Stalker, 2015

The Privatisation of Biodiversity? Colin T. Reid, Walters Nsoh, 2016-08-26 Current regulatory approaches have not prevented the loss of biodiversity across the world. This book explores the scope to strengthen conservation by using different legal mechanisms such as biodiversity offsetting, payment for ecosystem services and conservation covenants as well as tradable development rights and taxation. The authors discuss how such mechanisms introduce elements of a market approach as well as private sector initiative and resources. They show how examples already in operation serve to highlight the design challenges, legal, technical and ethical, that must be overcome if these mechanisms are to be effective and widely accepted.
