Getting to Grips with BIM James Harty, Tahar Kouider, Graham Paterson, 2015-12-14 With

the UK government's 2016 BIM threshold approaching support for small organisations on interpreting filtering and applying BIM protocols and standards is urgently required Many small UK construction industry supply chain firms are uncertain about what Level 2 BIM involves and are unsure about taking first steps towards having BIM capability As digitisation increasingly impacts on work practices Getting to Grips with BIM offers an insight into an industry in change supplemented by practical guidance on managing the transition towards more widespread and integrated use of digital tools to manage the design construction and whole life use of buildings

Interior Design Using Autodesk Revit 2015 Daniel John Stine, 2014 The intent of this book is to provide the interior design student a well rounded knowledge of Autodesk Revit tools and techniques These skills can then be applied to enhance professional development in both academia and industry The overall premise of the book is to learn Revit while developing the interior of a two story law office The reader is provided an architectural model with established columns beams exterior walls minimal interior walls and roofs in which to work This allows more emphasis to be placed on interior design rather than primary architectural elements The chapters chronology generally follows the typical design process Students will find this book helps them more accurately and efficiently develop their design ideas and skills The first chapter introduces the reader to Revit Building Information Modeling BIM and the basics of opening saving and creating a new project The second provides a quick introduction to modeling basic elements in Revit including walls doors windows and more This chapter is designed to show students how powerful Revit is and hopefully make them more excited about learning it The remainder of the book is spent developing the interior space of the law office with an established space program A student will learn how to view and navigate within the provided 3D architectural model managing and creating materials and develop spaces with walls doors and windows Once all the spaces are added to the model several areas are explored and used as the basis to cover Revit commands and workflows At the end of this tutorial the reader will be able to model floor finishes ceilings with soffits casework custom reception desk restrooms furniture and light fixtures Additional features such as tags schedules and photo realistic rendering will be covered

Eco-efficient Masonry Bricks and Blocks Fernando Pacheco-Torgal, Paulo B. Lourenco, Joao Labrincha, Prinya Chindaprasirt, S Kumar, 2014-11-27 Masonry walls constitute the interface between the building's interior and the outdoor environment Masonry walls are traditionally composed of fired clay bricks solid or perforated or blocks concrete or earth based but in the past and even in the present they were often associated as needing an extra special thermal and acoustical insulation layer However over more recent years investigations on thermal and acoustical features has led to the development of new improved bricks and blocks that no longer need these insulation layers Traditional masonry units fired clay bricks concrete or earth based blocks that don't offer improved performance in terms of thermal and acoustical insulation are a symbol of a low technology past that are far removed from the demands of sustainable construction This book provides an up to date state of the art review on the eco efficiency of masonry units particular emphasis is placed on the design properties performance durability and LCA

of these materials Since masonry units are also an excellent way to reuse bulk industrial waste the book will be important in the context of the Revised Waste Framework Directive 2008 98 EC which states that the minimum reuse and recycling targets for construction and demolition waste CDW should be at least 70% by 2020 On the 9th of March 2011 the European Union approved the Regulation EU 305 2011 known as the Construction Products Regulation CPR and it will be enforced after the 1st of July 2013 The future commercialization of construction materials in Europe makes their environmental assessment mandatory meaning that more information related to the environmental performance of building materials is much needed Provides an authoritative guide to the eco efficiency of masonry units Examines the reuse of waste materials Covers a range of materials including clay cement earth and pumice
