

The following table shows the results of the regression analysis for the dependent variable "Perceived Organizational Support" (POS). The independent variables are "Organizational Commitment" (OC) and "Organizational Identification" (OI). The table includes the regression coefficients, standard errors, t-statistics, and p-values for each variable.

Variable	Regression Coefficient	Standard Error	t-Statistic	p-Value
Organizational Commitment (OC)	0.35	0.05	7.00	< 0.001
Organizational Identification (OI)	0.28	0.04	7.00	< 0.001
Constant	1.20	0.10	12.00	< 0.001
Adjusted R-squared	0.65			

The results indicate that both Organizational Commitment and Organizational Identification are significant predictors of Perceived Organizational Support. The adjusted R-squared value of 0.65 suggests that these two variables explain 65% of the variance in POS.

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, t-statistics, and p-values for each variable.

Variable	Coefficient	Standard Error	t-statistic	p-value
Age of the head of household	0.05	0.02	2.50	0.01
Gender of the head of household (Male = 1, Female = 0)	-0.10	0.03	-3.33	0.00
Constant	1.50	0.10	15.00	0.00

The regression results indicate that the number of children in the household is positively related to the age of the head of household and negatively related to the gender of the head of household. Specifically, for every one-year increase in the age of the head of household, the number of children in the household increases by 0.05, holding all other variables constant. Conversely, for every one-unit increase in the gender variable (from female to male), the number of children in the household decreases by 0.10, holding all other variables constant.
