

1. There was no organization in the instructions. The instructions should be written in a "... basic three-part structure of instruction, body, and conclusion (Korner 1981)." The instructions presented above failed all three, with one exception. There's no instruction on how to turn on the device. There's no review of instruction of how to be successful presented in the conclusion.
2. There is no defined audience for these instructions. With a clear audience, that will depict the "... the level of familiarity your readers have with the topic (Korner)." If the target audience is for people who are familiar with technology, the instructions don't have to go as in-depth as detail oriented if the target audience was asked for people that are not as tech-savvy. Then the instructions would have to be step by step.
3. There's no equipment needed list. That should be in the beginning of the instructions manual. With the equipment list, it could leave the reader with unanswered questions. What cord attaches to the computer to upload the recording? Questions such as that could be easily answered with an equipment list.

Agrawal,2012-12-06 The purpose of the Second Symposium on Empirical Foundations of Informa tion and Software Science EFISS was in essence the same as that of the First Symposium in this

series i.e. to explore subjects and methods of scientific inquiry which are of fundamental and common interest to information and software sciences and to map directions of research that will benefit from the mutual interaction of these two fields. In fact one of the most important results of the First EFISS Symposium was the conclusion that the commonality of these two sciences is much more than just the commonality of their objects of study namely the study of informative and prescriptive properties of texts in all kinds of sign systems such as natural or artificial languages. Rather the most challenging problems appear to be in the areas in which both these sciences overlap such as for instance the problem of trade offs between informative and prescriptive uses of texts. This problem can be formulated in generic terms as follows: given a certain kind of action or activity which has been prescribed to some agent i.e. which is required to be implemented or carried out, what kind of information should be provided to the agent in what form and how should it be distributed over the contextual structure of the prescriptive text to enable the agent to carry out the action or activity most effectively and efficiently.
